Note

This appliance conforms with EEC Directive 87/308/EEC regarding interference suppression.

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

- 1. Check the area of your repair for unsoldered or poorly-soldered connections. Check the entire board surface for solder splashes and bridges.
- 2. Check the interboard wiring to ensure that no wires are "pinched" or contact high-wattage resistors.
- 3. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
- 4. Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replace-
- 5. Check the B+ voltage to see it is at the values specified.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK A OR DOTTED LINE WITH MARK A ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUB-LISHED BY SONY.

Introduction

Overview of the CCD-V600E

The CCD-V600E Video Hi8 handycam is a compact colour video camera/recorder (camcorder). You can use it to shoot the pictures you want and play them back on your television set. It is equipped with a stereo recording system which offers high quality sound to match the Hi8 picture. The full featured camera section offers various camera adjustments to create just the kind of programme you wish.

Who this Manual is for

This manual is designed for you. You can use this manual to find exactly the information you need, whether you are familiar with video equipment or not.

How this Manual is Organized

This manual consists of seven sections. Section 1 explains the preliminary steps necessary to prepare for shooting and playback.

Section 2 explains the very basic techniques of shooting.

Section 3 explains how to playback the tape being shot in section 2.

Section 4 explains additional shooting techniques which will add flavor to your programmes.

Section 5 explains the unique shooting techniques including the programmed AE mode and the manual mode.

Section 6 explains the techniques on how-toedit your video programmes.

Section 7 explains other useful information to enjoy the best of your camcorder.

If you have any problem during operation, see the "Trouble Checks" section.

If you are beginner, start with "Recording a picture with the automatic adjustments." If you are very familiar with camcorder operation, also refer to "Operating the Camera Section (2) and (3)" for advanced shooting techniques.

How this Manual Works

Refer to the information below to help you follow the instructions in this manual.

- Controls and settings on the camcorder are shown in capital letters:
 ex. Set the POWER switch to CAMERA.
- The letter in an illustration corresponds to the letter in the text:
 ex. (A-1) or (B)
- The step numbers in an illustration correspond to the step numbers in the text.
- Notes and cautions are enclosed with lines.

Note on batteries

Battery will not last as long in cold places.

Supplied Accessories

The camcorder is packed together with the following units. Check to see that everything is contained in the package.

- Wireless Remote Commander (1)
- R6 (size AA) batteries for the Wireless Remote Commander (2)
- . Battery pack NP-66H (1)
- AC power adaptor AC-V35/AC-V35A (1)
- Lithium battery CR2025 (1)
- RFU adaptor RFU-90E (1), or RFU-89EA (1)
 With the RFU-89EA, an aerial selector and a screwdriver are supplied.
- A/V connecting cable (3 phono to 3 phono) (1)
- Video cable with S video connectors (4-pin mini DIN to 4-pin mini DIN) (1)
- · Cassette tape (1)
- Shoulder strap (1)
- Jack covers* (1 set)
- Lens cap* (1)

Items with an asterisk (*) is attached to the unit.

SECTION 1 GENERAL

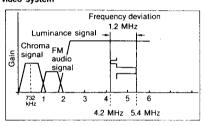

This section is extracted from instraction of manual. (AEP, UK model)

Technical Information

Hi8 (High Eight) Video System

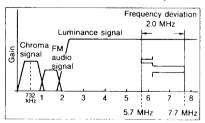

The 8 mm video system employs a metal powder tape. This means the video camera recorder is capable of recording a large amount of information and enhances picture quality. Taking advantage of the 8 mm video system, the Hi8 video system has been developed. The main characteristics of the Hi8 video system are as follows:

(A-1) Frequency allocation of the standard 8 mm video system

(A-2)

Frequency allocation of the Hi8 video system

Super High Quality Picture

(A-1), (A-2)

The information capacity is a key element for picture improvement. It can be increased by shifting up the FM carrier frequency range. In the Hi8 video system, the FM carrier frequency range of the luminance signal is shifted up to 5.7–7.7 MHz. This is higher than the 4.2–5.4 MHz range of the standard 8 mm video system. Thanks to this, the horizontal resolution is improved to more than 400 lines.

Use of High Grade Tape to Match the Hi8 Video System

Metal evaporated tape is ideal for video systems because it has large magnetic energy that allows for high-density recording. The Hi8 video camera recorder uses such high-grade tape for the Hi8 video system, covering a wide frequency range, to achieve a high-quality video signal for recording/playback.

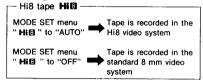

S VIDEO (Separate Luminance/ Chroma Signal) Output Connector

Conventionally, video equipment exchanges the composite video signal containing the luminance (Y) signal and the chroma (C) signal mixed. The composite video signal is liable to produce interference resulting in picture quality loss. On the contrary, an S VIDEO connector transmits the video signal separated into the luminance signal and the chroma signal. Flickers and colour blur in the picture are minimized with the separated video signal, and sharpness is enhanced to such an extent that hair and fine stripes are clearly visible. The S VIDEO connector also assures an excellent editing quality with minimum picture quality loss.

Compatibility with Conventional Video Camera Recorders

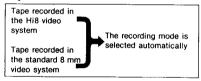

A high-quality picture can be recorded and played back on a tape for the Hi8 video system.

Recording with this unit

Playback with this unit

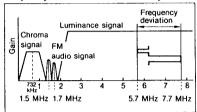

- A tape recorded in the Hi8 video system cannot be played back with an conventional 8 mm video camera recorder.
- A standard 8 mm tape
 acannot be recorded in the Hi8 video system.
- A tape for the Hi8 video system cannot be recorded and played back in the Hi8 video system with a conventional video camera recorder.
- The recording tape speeds in the Hi8 video system are compatible with the conventional 8 mm format.

Recording/playback time in the SP mode is 1.5 hours using a E5-90/P5-90 tape or the equivalent.

	With this unit				
Cassette	Rec				
used	Hi8	Normai	Playback		
Standard 8 mm tape 🖪	No	Yes	Yes		
Hi8 tape HiB	Yes	Yes	Yes		

 Ω

Frequency allocation of the Hi-Fi system

Hi-Fi Stereo System

On the 8 mm video standard track the sound is recorded/played back in AFM Hi-Fi monaural. On this camcorder, an additional AFM Hi-Fi stereo sound can be recorded on the standard track.

The AFM Hi-Fi stereo sound is recorded as L+R on the 1.5 MHz carrier and L-R on the 1.7 MHz carrier in FM as illustrated. (A-3) This method was adopted to maintain compatibility with the conventional AFM Hi-Fi monaural sound.

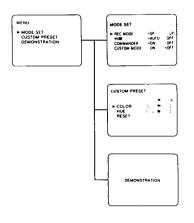

When playing back the tape recorded in this Hi-Fi stereo system, a matrix circuit is used to produce the L and R stereo sounds separately. When a conventional AFM Hi-Fi monaural model is used to playback a tape recorded by this camcorder in AFM Hi-Fi stereo, the playback sound will be in a L+R monaural sound. This is because the monaural models will playback only the sound recorded in the 1.5 MHz carrier.

The AFM Hi-Fi stereo system of this camcorder enables you to enjoy a live stereo sound atmosphere.

Compatibility with the conventional 8 mm video format

When you playback a tape recorded in AFM Hi-Fi stereo on a conventional 8 mm video equipment, the sound will be in monaural.

(B-1)

On the Menu System

The menu system of this camcorder enables setting and adjustments to further enjoy the features and functions. The menu is displayed in the viewfinder or on the TV screen if connected to a TV. The menu consists of two main parts, one for camera recording and the other for playback and editing. Refer to the following section for a quick overview of the two menus.

Menu System for Camera Recording

(B-1)

MODE SET

Various mode settings for camera recording is made in this menu.

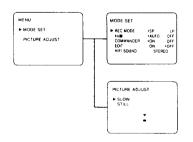

CUSTOM PRESET

The camcorder can be adjusted to perform camera recording in the desired picture.

DEMONSTRATION

The camcorder automatically shows the manual mode, four programmed AE modes, each title mode, menu displays in sequence.

(B-2)

Menu System for Playback and Editing (B-2)

MODE SET

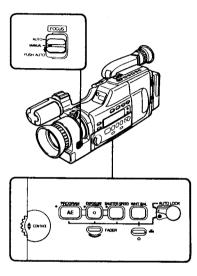

Various mode settings for playback and editing are made in this menu.

PICTURE ADJUST

The playback picture can be adjusted to obtain maximum quality.

Selecting the Camera Recording Modes

(C)

(C)

Various camera recording modes are available in this camcorder. Automatic adjustment of aperture, gain, white balance, focus, plus the locked shutter speed offers worry-free camera recording for the beginner. Manual adjustment of each of these parameters offers effective camera recording to meet different object and shooting conditions.

Plus, the programmed AE mode offers additional shooting techniques to enrich the creation of your video program.

Full Automatic Adjustment Mode

When the FOCUS switch is set to AUTO, focus is automatically adjusted.

When the AUTO LOCK switch is set to AUTO LOCK, aperture, gain, and white balance are automatically adjusted and the shutter speed is locked to the normal speed (1/50). The FOCUS switch setting has no relation with the AUTO LOCK switch setting.

Manual Adjustment Mode

FOCUS

- Set it to AUTO to activate the automatic focusing in manual adjusting mode.
- Set this switch to MANUAL to focus manually.
- Press it down during manual focusing mode, automatic focusing is activated for the extension that the switch is pressed down (PUSH AUTO).

By setting the AUTO LOCK switch down, each parameter can be adjusted manually.

EXPOSURE

- Each press of this button switches between automatic and manual adjustment.
- 21 exposure values (F16/ddB to F1.4/ + 18dB) plus aperture close can be selected using the CONTROL dial in the manual mode.

SHUTTER SPEED

- Each press of this button switches the shutter speed as follows:
 1/50 (No indication) → 1/120
 - 1/1000 ----
- 16 shutter speeds (1/50 to 1/10000) can be selected using the CONTROL dial in the manual mode.

WHT BAL (white balance)

- Each press of this button switches the mode as follows:
- Automatic (no indication)
- → ♣ (One-push adjustment)
- ₁ -∆- (Indoors)
- ↓ (Outdoors)

(One-push white balance)

 When pressed during mode, the white balance can be adjusted manually.

Programmed AE Modes

By setting the AUTO LOCK switch down, four programmed AE modes can be selected to match distinctive camera recording conditions.

Portrait mode

Use to focus on the subject and to have the background out of focus. The aperture and shutter speed is automatically adjusted to maintain the appropriate exposure according to the size and brightness of the subject.

Sports mode

Use to shoot subjects moving at high speeds and then play it back clearly in slow or still. The aperture and shutter speed is automatically adjusted to maintain the appropriate exposure according to the speed of the subject.

Aperture priority mode

Select the desired aperture (F1.4 to F16) with the CONTROL dial and the shutter speed will be automatically adjusted to maintain the appropriate exposure.

Shutter priority mode

Select the desired shutter speed (1/50 to 1/10000) with the CONTROL dial and the aperture will be automatically adjusted to maintain the appropriate exposure.

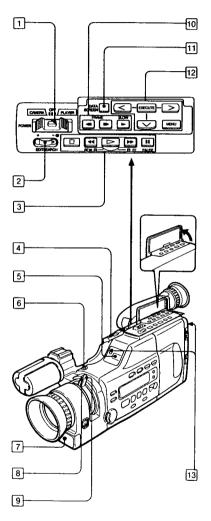

Manual Mode

The shutter speed is locked to the normal speed (1/50) and the exposure is adjusted automatically

When you press the EXPOSURE and SHUTTER SPEED buttons in this mode, the exposure and shutter speed can be selected by using the CONTROL dial in the manual mode.

Note

Focus and white balance can either be adjusted automatically or manually during the programmed AE mode. The adjusting method is same as those in the "Manual Adjustment Mode."

Identifying the Parts

(D-1)

For details of the use of each parts, refer to the pages indicated in .

(D-3)

(D-3)

33 (headphones) jack (stereo mini jack)

34 REMOTE connector (stereo mini-minijack) Connect a wired remote control unit, a editing controller (not supplied), etc.

35 Accessory shoe

Attach a video light, external microphone, (not supplied) etc.

36 Built-in one-point stereo microphone*

37 BUILT-IN MIC (microphone)/WIND selector @

38 EXT MIC and DC OUT (microphone power output) iack

Connect an external microphone (not supplied). The DC OUT jack supplies power to it. When connecting "plug-in-power" microphones, use the MIC jack only.

39 Grip strap

40 S VIDEO output connector (4-pin mini DIN connector) 🕰. 🤀. 🚯

[41] AUDIO L/R output jacks (phono jacks)

42 RFU DC OUT (RFU adaptor DC output) jack (special minijack) (5), (5)

Attach the supplied RFU adaptor here.

43 VIDEO output jack (phono jack) 49, 49, 49

About the ((LANC) mark

(LANC) stands for Local Application Control Bus System. The & (LANC) connector is used for controlling the tape transport of video equipment and peripherals connected to it. This connector has the same function as the connectors indicated as CONTROL L or REMOTE.

* Note on the built-in microhone

The microphone is fixed to the camcorder. Do not turn the microphone or hold the camcorder by the microphone. This may damage the camcorder

(D-4)

(D-4)

44 Viewfinder ®

The picture being recorded or played back can be monitored in black and white in here. Caution indicators, tape operation modes, function modes, menu are also displayed.

45 Sports finder

As the focal length is long, you can monitor the picture while being away from the eyecup.

- 46 Viewfinder lens adjustment ring
- 47 Eyecup
- 48 Battery mounting surface
- 49 Hooks for shoulder strap
- 50 PUSH SLIDE button

Press this button and slide the viewfinder to the desired position.

51 STANDBY switch

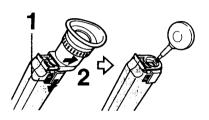

Slide up to set the camcorder to the standby mode.

52 START/STOP button

Press to start and stop camera recording.

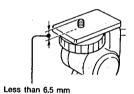

- 53 Lens cap
- 54 Tripod receptacle (bottom)
- 55 Lithium battery compartment (bottom) @

(D-5)

To remove the dust from inside the viewfinder (D-5) Detach the sports finder as illustrated and clean the surface of the screen with a blower.

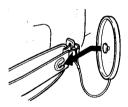

(D-6)

Note on attaching a tripod (D-6)

When attaching a tripod other than Sony's, make sure that the length of the camera mounting screw is less than 6.5 mm. Otherwise, the screw may damage the inner parts of the camcoder.

(D-7)

When the lens cap is removed (D-7) Attach the lens cap to the grip strap.

9

Wireless Remote Commander

You can record or play back a tape from a distance. The buttons on the Commander with the same name or mark as those on the camcorder have the same function.

When you use the Commander

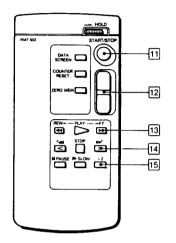

Be sure to select "COMMANDER ON" in the MODE SET menu (page 38 and 50) and then start operating the camcorder. Point the Commander to the remote sensor on the camcorder.

- 1 DATA SCREEN button
- 2 COUNTER RESET button . .
- 3 ZERO MEM (memory) button ,
- 4 → REW ⊕ (rewind) button ⊕, ⊕
- 5 </ > (reverse direction/reverse frame) button 😝
- 6 II PAUSE button 🖨, 🚭
- 7 > PLAY button . .
- 8 SLOW ▶► button ❸
- 9 STOP button

10 HOLD switch

Provided only on the Commander. Slide in the direction of the arrow to prevent the buttons from being accidentally depressed.

(D-9)

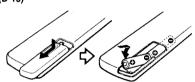

(D-9)

- 11 START/STOP button Press to start and stop camera recording.
- 12 Power zoom button @
- 13 >> FF (fast forward) button @ .
- 14 >/11> (forward direction/forward frame) button 🖨
- 15 X 2 button 69

Provided only on the Commander.

(D-10)

Inserting batteries

Insert two R6 (size AA) batteries with polarity positioned correctly.

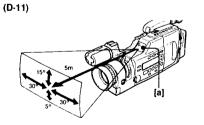

Remotely controllable range

(D-11)

Point the Commander towards the remote sensor [a].

Notes on batteries

- . The batteries will last for about six month under normal operation. However, if the Commander will not be used for a long period, remove the batteries to avoid possible damage from battery leakage.
- Do not let direct sunlight or strong light source light the camcorder's remote control sensor. Remote control with the Commander may not be
- The command mode of the Commander is VTR 2. Avoid using Sony VTRs with the same command mode at the same time.

Connecting the Power Sources

First Choose the Power Source

Place	Power source	Accessory to be used
Outdoors	Battery pack	Battery pack NP-66H (supplied), NP-77H NP-77, or NP-55
	Alkaline batteries	Battery case EBP-77
Indoors	House current	AC power adaptor AC-V35/ AC-V35A (supplied), AC-V30, or AC-V55
In the car	12 V or 24 V car battery	DC pack DCP-77, or AC power adaptor AC-V55 and car battery cord DCC-16AE

Note on power sources

Disconnecting the power source or removing the battery pack during recording or playback may damage the inserted tape. If disconnected, supply the power again immediately.

Using the Battery Pack

Step 1

Charge the battery pack. (E-1)

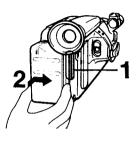

- 1 Align the groove on the battery pack with those on the AC power adaptor.
- 2 Slide in the battery pack to the right as illustrated.
- 3 Connect the AC power adaptor to a wall outlet.
- 4 Set the CHARGE/VTR selector to CHARGE. Charging begins.

		NP-66H (supplied)		NP-77	NP-77H
- 1	lequired harging time	100	60	120	140

(approx. minutes using AC-V35/AC-V35A)

Refer to the operating instructions of the AC power adaptor for details.

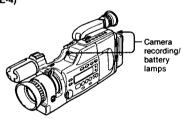

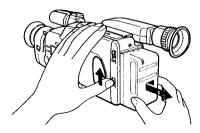

(E-3)

(E-4)

(E-5)

Step 2

Mount the battery pack on the camcorder. (E-2)

- 1 Align the right side of the battery pack with the line on the camcorder.
- 2 Slide in the battery pack to the right as illustrated.

Note

Make sure that the battery fits completely on the mounting surface of the camcorder. Imperfect mounting may damage the projections of the camcorder.

Battery life

A fully charged battery pack lasts for:

	NP-66H (supplied)		NP-77	NP-77H
Battery life	65	35	70	90

(approx. minutes, continuous recording when used indoors)

To remove the battery pack

(E-5)

Hold the BATT knob up, and slide the battery pack to the left.

Other options

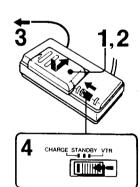

- AC-V55 AC power adaptor:
- You can charge two battery packs.
- . DC-V30 car battery pack:

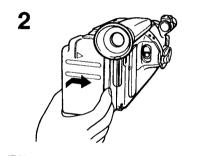

You can charge a battery pack by connecting the car battery charger to the cigarette lighter socket.

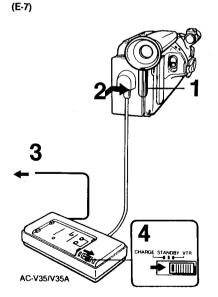

If you have an NP-4000

You can use it for long outdoor recording.

(E-1)

Using Alkaline Batteries

(E-6

The EBP-77 battery case (not supplied) is required.

- 1 Insert 12 R6 (size AA) alkaline batteries into the battery case.
 You cannot use the manganese batteries.
- 2 Attach the battery case in the same way as the battery pack.

Battery life

Approximately 95 minutes under continuous recording when used indoors.

To remove the battery case

Proceed in the same way as the battery pack.

Notes on battery life while using the battery case

- · Batteries does not last as long in cold places.
- No indication appears in the viewfinder to warn of a weak battery.

Using the House Current

(E-7)

The supplied AC-V35/AC-V35A AC power adaptor is required.

- 1 Align the right side of the connecting plate with the line on the camcorder.
- 2 Slide in the connecting plate to the right.
- 3 Connect the AC power adaptor to a wall outlet.
- 4 Set the CHARGE/VTR selector on the AC power adaptor to VTR.

See the operating instruction of the AC power adaptor for further information.

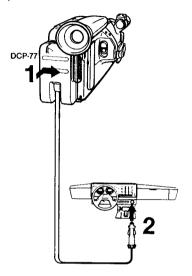

To remove the connecting plate

Proceed in the same way as the battery pack.

Other power sources

The AC-V30 or AC-V55 AC power adaptor can also be used.

(E-8)

Using the Car Battery

(E-8)

The DCP-77 DC pack (not supplied) is required.

- 1 Align the right side of the DC pack with the line on the camcorder and slide it to the right.
- 2 Connect the car battery cord to the cigarette lighter socket of a car (12 V or 24 V).

To remove the DC pack

Proceed in the same way as the battery pack.

Other options

The AC-V55 AC power adaptor and the DCC-16AE car battery cord can also be used to operate this camcorder on a 12 V or 24 V car battery.

Using the Best of the Battery Pack

How to prepare the rechargeable battery packs

Have a sufficient battery pack power to perform 2 or 3 times as much recording than you have planned.

"Battery life" as indicated in the instruction manual or catalogue of the camcorder is measured by the continuous recording time of the camcorder, placed at a room temperature using a full-charged battery.

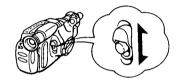

Battery life is shorter in a cold climate. Battery efficiency is decreased and the battery will be used up more quickly.

Turn the STANDBY switch of the camcorder off when not recording to save battery power.

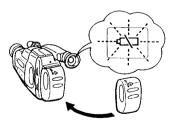

A smooth recording can be made even if recording is stopped and started again. While positioning the subject, selecting an angle, or looking through the viewfinder, the lens moves automatically and the battery is used. The battery is also used when a tape is inserted or removed.

When the rechargeable battery pack should be replaced

When the I mark in the viewfinder changes from slow blinking to rapid blinking while you are recording.

Turn off the power switch of the camcorder and replace the battery pack. Leave the tape in the camcorder in order to obtain a smooth recording after the battery pack is replaced.

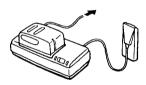

Notes on charging

Before using the battery pack, charge it sufficiently. A brand-new battery pack is not charged.

Recharge the battery pack when it is exhausted.

- If recording is completed before the △□ mark appears in the viewfinder, it is recommended that you remove the tape, set POWER to CAMERA, slide up STANDBY, and leave the camcorder until the (mark blinks rapidly.
- · Repeated charging while some capacity remains causes a lowering of battery capacity. However, the original battery capacity can be recovered if you fully discharge and fully charge the battery again.

Recharge the battery pack before using.

If the battery pack is charged fully but not used for a long time (about 1 year), it becomes discharged.

Charge it again but in this case the battery life will be shorter than normal. After several charging and discharging cycles, the battery life will recover its original capacity.

Keep the terminals clean

If the terminals (metal parts on the back) are not clean, the battery duration will be shortened.

When the terminals are not clean or when the battery pack has not been used for a long time, install and remove the battery pack from time to time. This will improve the contact condition. Also wipe the + and - terminals with a soft cloth or paper.

Notes on the rechargeable battery pack

Why the battery pack heats up

During charging or recording, the battery pack heats up. This means energy has been generated and a chemical change has occurred inside the battery pack, but this is not dangerous.

How to care for the battery pack

- · Remove the battery pack from the camcorder after using it, and keep it in a cool place.
- When the battery pack is attached to the camcorder, a small amount of current flows to the camcorder even if the POWER switch is turned off. It causes overdischarging and will shorten battery life.
- The battery pack is always discharging even when it is not in use after charging. Thus, it is recommended you charge the battery before using.

How to use the switch on the battery pack

This switch is provided so that you can remember the charging condition. Set the switch to the "no mark" position when charging is completed. Set the switch to the "red mark" position when the battery is used up.

How many times can the battery pack be recharged

It can be fully charged and discharged about 500 times under normal temperatures. If the C mark blinks rapidly just after turning on the camcorder with a fully charged battery pack, the battery pack should be replaced with a new fully charged one.

Temperature during charging

Lower temperature require a longer charging time. Charging under temperatures ranging from 10°C to 30°C is recommended.

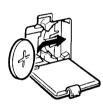

Setting the Date and Time

(F-1)

1

2

(F-2)

വ

Inserting the Lithium Battery

(F·1)

This camcorder uses a lithium battery to activate the clock and to keep the titles in the memory.

Install the supplied lithium battery before operating it for the first time.

- 1 Open the cover of the lithium battery compartment on the bottom.
- 2 Install the supplied CR2025 lithium battery with the ⊕ side facing out.
- 3 Close the cover.

To remove the lithium battery (F-2)

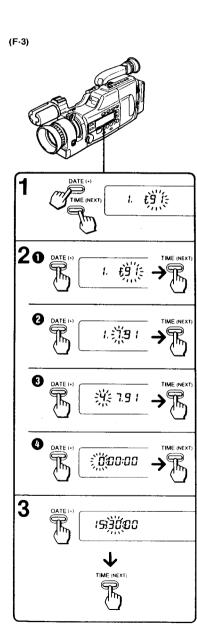

Press the side of the battery in the direction as indicated for installation.

Note on lithium battery life

The lithium battery lasts for approximately 1 year under normal operation. When the lithium battery becomes weak, the time indication keeps blinking in the display window and blinks in the viewfinder for about 5 seconds when the POWER switch is set to CAMERA. In this case, keeping the battery pack or another power source connected, replace the lithium battery with a Sony CR2025. Use of other lithium batteries may present a risk of fire or explosion. If the battery pack or other power sources were not attached during the lithium battery replacement, readjust the date and time after installing a new lithium battery.

Cautions

- Keep the lithium battery out of the reach of children.
- Should the battery be swallowed, immediately consult a doctor.
- Wipe the battery with a dry cloth to assure a good contact.
- Be sure to observe the correct polarity when installing the battery.
- Do not hold the battery with metallic tweezers, otherwise a short-circuit may occur.
- Battery may explode if mistreated. Do not recharge, disassemble, or dispose of in fire.

Setting the Date and Time

(F-3)

Before you begin

- Check that a power source is installed to the camcorder.
- Set the POWER switch to CAMERA and slide the STANDBY switch up.

Operation

- 1 Press DATE (+) and TIME (NEXT) simultaneously for more than 2 seconds. The date indication blinks in the display window. The DATE button now functions as + (advance the number) and the TIME button functions as NEXT (execute). If you went passed the desired number, keep pressing the + button. The number eventually returns to the original one.
- 2 Adjust the year 1, month 2, day 3, hour 3 in this order.
 First, adjust the blinking digits with +, and then press NEXT.
- 3 Adjust the minute and press NEXT to set the seconds to "00". The clock starts operating.

To correct date and time setting Repeat steps 2 and 3.

To advance the digits faster Keep pressing +.

To check the preset date and time
Press DATE or TIME. When you press the
same button again, the indication is changed

to the counter indication.

(G-2)

(G-1)

EJEC1

Inserting Tapes

- 1 Check that a power source is installed.
- 2 Press and slide the EJECT button. The cassette holder automatically opens. Do not open it forcibly while it is moving.
- 3 Insert a cassette with the window facing outside.
- 4 Press the PUSH mark to close the cassette

Ejecting the Tape

- 1 Check that a power source is connected.
- 2 Press and slide the EJECT button. The cassette holder automatically opens.
- 3 Take out the tape.
- 4 Press the PUSH mark to close the cassette

Preventing Accidental Erasure

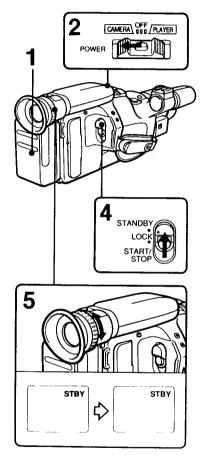

(G-2)

Slide out the red tab on the cassette to prevent recording. To re-record on the same tape, slide the tab in.

Notes on cassette handling

- · Never insert anything in the small holes on the rear of the cassette. These holes are used to sense the type and thickness of the tape, or if the tab is out or in, etc.
- · Store tapes in their cases and keep them away from heat, humidity, direct sunlight, magnetic fields, dust and mold.

Adjusting the Viewfinder

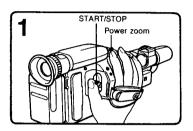

The position of the viewfinder lens for optimum vision varies depending upon the person. Adjust it when using the camcorder for the first time, or when using it after someone

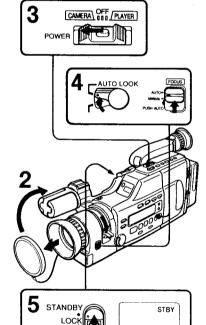

- 1 Check that a power source is installed.
- 2 Hold down the green button and slide the POWER switch to CAMERA.
- 3 Insert a cassette.
- 4 Slide the STANDBY switch up.
- 5 Turn the viewfinder lens adjustment ring so that the "STBY" indication in the viewfinder comes into focus.

When the viewfinder touches your nose Press the PUSH SLIDE button and slide the viewfinder to the desired position.

Recording a Picture with the **Automatic Adjustments**

(1-1)

START

STANDBY

(I-1)

Before recording "once-only" events, we strongly recommend making a trial recording and checking that everything is working perfectly.

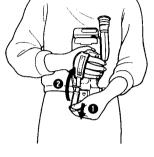

- 1 Hold the camcorder as illustrated. Put your hand through the grip strap and check that your thumb easily touches the START/STOP button. Do not cover the AF sensor under the lens with your fingers, etc.
- 2 Remove the lens cap and attach it to the grip belt.
- 3 Hold down the green button and slide the POWER switch to CAMERA.
- 4 Set the AUTO LOCK switch to AUTO LOCK, the FOCUS switch to AUTO and turn the zoom lever downwards.
- 5 Slide the STANDBY switch up until it "STBY" appears in the viewfinder. The camcorder is now set to the recording standby mode. The camcorder adjusts the focus automatically. Do not turn or stop the focus ring forcibly.
- 6 Press the START/STOP button. "REC" appears and the red lamp lights in the viewfinder. The carncorder is recording.

To stop recording momentarily Press the START/STOP button again. The camcorder enters the standby mode with "STBY" indication in the viewfinder.

To stop recording Slide the STANDBY switch down and set the POWER switch OFF.

(1-2)

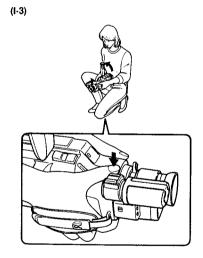

How to fix the grip strap

In step 1 on the previous page, 1 hold the camcorder pressed to your body and 2 pull the grip strap upwards.

For low-position shooting

The viewfinder can be turned up 90 degrees. Press the REC START/STOP button in the front of the camcorder instead of the START/STOP button to start and stop the camera recording.

COMMANDER ON OFF
CUSTOM MODE ON OFF

How to record in the Hi8 mode

The camcorder is set to record in the AUTO mode which automatically records in the Hi8 mode when a Hi8 tape is used. To record in the standard mode with the Hi8 tape, change the setting in the menu.

See "Using the Menu for Camera Recording" on page 38. On the playback compatibility of

Hi8 tape and standard tape refer to page 7.

When recording a long continuous programme (I-5)

The camcorder is set to record in the SP (standard play) mode. To record a long continuous programme, change the setting in the MODE SET menu to the LP (long play) mode. In the LP mode, you can record as twice long as in the SP mode. See "Using the Menu for Camera Recording" on page 38. Also, be sure to have a sufficient battery pack.

Notes on recording

- To record from the beginning of the cassette, run the tape for about 15 seconds before recording.
 This will avoid missing the starting point when the tape is played back.
- If the POWER switch is moved during recording, the tape will stop.
- When moving from indoors to outdoors, or vice versa, slide the STANDBY switch up and point the camcorder at a white object for about 15 seconds so that the white balance is properly adjusted.

Note on standby mode

If you leave the camcorder in the standby mode for 5 minutes or more, the camcorder will automatically be turned off. To resume the standby mode, slide the STANDBY switch down once and slide it up again. To start recording, press the START/STOP button.

Notes on light sources

- A vertical band may appear when a subject such as a candle flame or a light is shot against a dark background.
- If you shoot an object under bright lighting conditions just after shooting in a dark place, the picture may not appear in the viewfinder. In this case, point the camcorder to another direction.

Brightness Levels

The single greatest influence on picture quality is the brightness level. Using the following chart as a reference, take a few minutes to familiarize yourself with brightness levels to improve your recording.

(1-6)

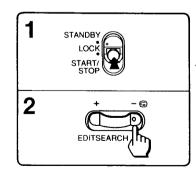

(I·7)

(1-8)

To Record Date or Time

(1-6)

- 1 Set the camcorder in the camera recording standby or camera recording mode.
- 2 Press the DATE button to indicate the date or the TIME button to indicate the time. The date or time displayed in the viewfinder will be recorded together with the picture.

To stop recording date or time

Press the DATE or TIME button. The indication is cleared and the recording continues.

When there is Strong Wind

(1-7)

Set the BUILT-IN MIC selector to WIND. The noise resulting from the wind will be reduced.

After recording, set it to the upper (green) position.

To Check the Last Portion of the Recording

(1-8)

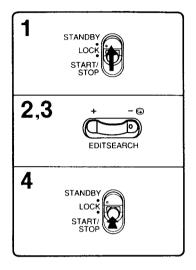

- 1 Set the camcorder in the recording pause mode by pressing the START/STOP button.
- 2 Press the 🖘 side of the EDITSEARCH button.

The last few seconds of the recorded portion is rewound and then is played back in the viewfinder. After a few seconds of playback, the camcorder returns to the recording pause mode.

If the picture was not recorded

The video heads may be contaminated. Clean the heads using the Sony V8-25CLH video head cleaning cassette or the equivalent.

(1-9)

To Re-record on a previously Recorded Portion

(1-9)

- 1 Slide the STANDBY switch up.
 The camcorder enters the standby mode.
- 2 Look in the viewfinder and search for the point from where you want to begin the recording.

Keep pressing the + side of the EDITSEARCH button to advance the picture at a normal playback speed or the - side to reverse the picture.

- 3 At the desired point, release the EDITSEARCH button.
- 4 Press the START/STOP button to start recording.

As long as the tape is not removed, the rerecorded picture will be smoothly connected even if the STANDBY switch is slid down and slid up again, or the power is turned off and on.

To stop recording

Slide the STANDBY switch down.

To Re-record a Picure in the Middle of a Recorded Tape (Insert Recording)

(1-10)

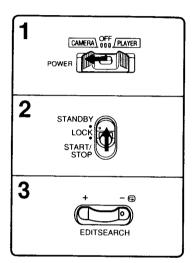

- 1 Hold down the green button and slide the POWER switch to CAMERA.
- 2 Slide the STANDBY switch up.
 The camcorder enters the recording standby mode.
- 3 While looking in the viewfinder, keep pressing the + or - side of the EDITSEARCH button and release it at the point where the insertion should end.
- 4 Press the COUNTER RESET button.
 The counter is reset to "0:00:00".
- 5 While looking in the viewfinder, keep pressing the side of the EDITSEARCH button and release the button at the point where the insertion should start.
- 6 Press the ZERO MEM button. The ZERO MEM indication appears. The insert end point is stored in the memory.
- 7 Press the START/STOP button. Insert recording starts. It stops automatically around the counter zero point.

To change the end point of the edit
Press the ZERO MEM button so that the ZERO
MEM indication disappears. Start from step 3.

Note

The picture may be distorted at the end of the inserted portion when it is played back.

(1-11)

Playing Back the Picture Instantly

(I-11)

You can check the recorded picture in the viewfinder. The sound is not heard.

- 1 Hold down the green button and slide the POWER switch to CAMERA.
- 2 Slide the STANDBY switch up.
- 3 Keep pressing the + or side of the EDITSEARCH button to playback the picture.
 - + side: To view the playback picture.
 - side: To view the playback picture in reverse.

To stop playback

Release the EDITSEARCH button.

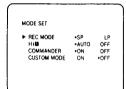

To monitor the sound while viewing the playback picture in the viewfinder

- 1 Connect the headphones to the O jack.
- 2 Hold down the green button and slide the POWER switch to PLAYER.
- 4 Press ▷ to start playback.

Using the Menu for Camera Recording

MODE SET menu, CUSTOM PRESET menu, and DEMONSTRATION menu can be used for camera recording. In the MODE SET menu. various settings to further enjoy the features of the camcorder can be selected. In the CUSTOM PRESET menu, the camcorder can be set to record in the desired picture tone. In the DEMONSTRATION menu, the camcorder displays the various indications and the operations available.

(J-1)

MODE SET Menu

(J-1)

REC MODE SP/LP

- . Select SP to record in the SP (Standard play, approximately 2,0051 cm/second) mode.
- . Select LP to record in LP (Long play, approximately 1.0058 cm/second) mode. It is useful for recording a long continuous programme. The quality of the playback picture in the LP mode, however, will not be as good as that in the SP mode.

Hi auto/off

- Select AUTO to set the recording mode (Hi8 or normal) automatically depending upon the tape being used.
- · Select OFF if you wish to record in the normal mode regardless of the type of tape being used.

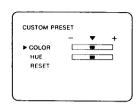

COMMANDER ON/OFF

- . Select ON when using the supplied Commander for camera recording.
- · Select OFF when the supplied Commander will not be used for camera recording.

CUSTOM MODE ON/OFF

- · Select ON to perform camera recording based on the setting made in the CUSTOM PRESET menu. See page 98.
- · Select OFF to perform camera recording without the setting made in the CUSTOM PRESET menu.

(J-2)

CUSTOM PRESET Menu

The camera can be preset to record in the desired picture using the CUSTOM PRESET menu. The items that can be preset are COLOR and HUE. See "Custom Preset Function" on page 98 for details.

(J-3)

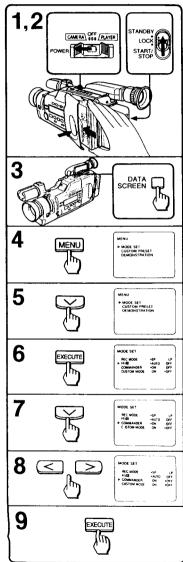

DEMONSTRATION Menu

The camcorder will automatically demonstrate the manual modes, programmed AE modes, title modes, MODE SET menu for camera recording, and the CUSTOM PRESET menu. The sequence can be monitored in the viewfinder or on a TV screen if connected.

Operation

- 1 Store 2 titles in the memory referring to pages 64 to 66.
- 2 To monitor the sequence on the TV screen, connect the camcorder and the TV referring to pages 41 to 43 and press DATA SCREEN.
- 3 Call up the MENU display and select **DEMONSTRATION** referring to page 40.
- 4 To get out of the DEMONSTRATION menu. press <, >, or \lor . To return to the MENU display, press MENU.

(J-4)

How to Call Up the Menu Display

(J-4)

Example: To select COMMANDER OFF.

- Set the POWER switch to CAMERA and insert a cassette.
- 2 Slide the STANDBY switch up.
- 3 Press the DATA SCREEN button to display the menu on the TV screen.
- 4 Press the MENU button.
 The MENU display appears.
- 5 Press v and move cursor to the desired item.
- 6 Press the EXECUTE button. The selected menu appears.
- 7 Press v and move cursor to the desired item.
- 8 Press < or > to select the desired setting.
- 9 Press the EXECUTE button. The setting is stored in the camcorder and the menu display is cleared from the viewfinder.

The setting is stored in the memory even if the POWER switch is set to OFF or the battery pack is removed, as long as the lithium battery is installed.

To display another menu

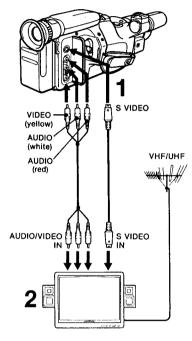

Start from step 1 in "How to Call Up the Menu Display."

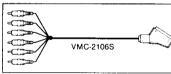

To return to the original screen Press the MENU button.

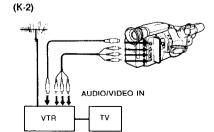

To make multiple settings within one menu After step 7 in "How to Cail Up the Menu Display", press \vee and move cursor to the desired item.

To clear the indication from the TV screen Press the DATA SCREEN button again.

(K-1)

Connections for Playback

To view the playback picture on the TV screen, the camcorder and TV and/or the VTR must be connected properly. Check the following connecting examples and go to the appropriate section to make the connections required.

- Case 1: Connecting the camcorder to a TV with video/audio input jacks.
- Case 2: Connecting the camcorder to a TV without video/audio input jacks. For the camcorder supplied with the RFU-90E RFU adaptor.
- Case 3: Connecting the camcorder to a TV without video/audio input jacks. For the camcorder supplied with the RFU-89EA RFU adaptor.

Case 1: Connecting to a TV with Video/ Audio Input Jacks

(K-1)

- 1 Connect the camcorder and the TV using the supplied AV connecting cable.
 - If your TV has an S video input jack, connect the S VIDEO jack on the camcorder and the S video input jack on the TV using the supplied S VIDEO connecting cable.
 - If your TV is a monaural type, connect only the white plug for audio on the TV and select "HIFI SOUND 1" in the menu. See "Selecting the Monitor Sound" on page 48.
 - If your TV has a 21-pin connector, use a connecting cable such as the VMC-2106S (not supplied).
- 2 Set the TV/VIDEO selector on the TV to

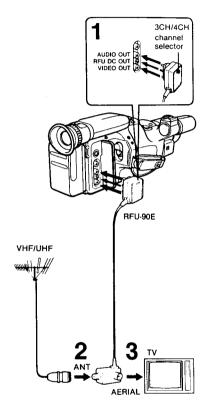

If your TV is connected to VTR

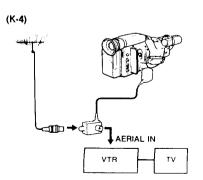

Connect the camcorder to the VTR instead of TV.

Note

For details on the TV, refer to the operating instructions of the TV.

(K-3)

Case 2: Connecting to a TV without Video/Audio Input Jacks

For the camcorder supplied with the RFU-90E RFU adaptor (K-3)

Step 1

Connecting the camcorder, the RFU adaptor, and the TV.

- Connect the RFU adaptor to the camcorder.
- 2 Connect the aerial and the RFU adaptor.
- 3 Connect the RFU adaptor to the TV.

Step 2

Selection of the TV programme position to monitor the camcorder playback.

- 1 Set the RF unit selector on the RFU adaptor to either 3CH or 4CH, whichever is not active in your area.
- 2 Turn on the TV and select the 0 position.
- 3 Tune the TV so that picture and sound from the camcorder are received.

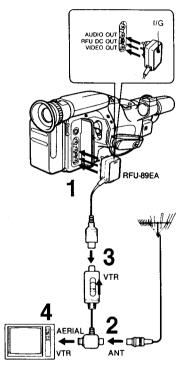

Notes

- Whenever playing back a tape, be sure to set the TV to the 0 position.
- In this connection, the sound will be in monaural.
- When you watch a TV programme, turn off the camcorder or disconnect the RFU adaptor from the camcorder.

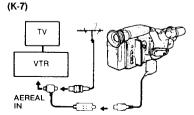

If your TV is connected to a VTR (K-4)

Connect the camcorder to the VTR instead of TV

Case 3: Connecting to a TV without Video/Audio Input Jacks

For the camcorder supplied with the RFU-89EA RFU adaptor (K-5)

Step 1

Connecting the camcorder, the RFU adaptor, and the TV

- 1 Connect the RFU adaptor to the camcorder.
- 2 Connect the aerial and the aerial selector.
- 3 Set the ANT/VTR selector on the aerial selector to VTR.
- 4 Connect the aerial selector to TV.

Step 2

Selection of the TV programme position to monitor the camcorder playback.

- Set the I/G selector on the RFU adaptor according to the TV system used in your ama.
- 2 Turn on the TV and select a programme position that is not active in your area.
- 3 Set the POWER switch of the camcorder to CAMERA and slide the STANDBY switch up.
- 4 Tune the TV so that the picture and sound from the camcorder is received.

 (For details, refer to the operating instructions of the TV.)

When the playback picture is not free of disturbance

- 1 Set the ANT/VTR selector on the aerial selector to ANT.
- 2 Select a programme postion between UHF channels 30 and 39, so that the TV shows no picture and a steady restling sound or no sound is heard.
- 3 Set the ANT/VTR selector on the aerial selector to VTR.
- 4 Turn the screw on the RFU adaptor slowly with the supplied screwdriver so that the playback picture is clearly displayed on the TV screen. (K-6)

If your TV is connected to a VTR (K-7) Connect the camcorder to the VTR instead of the TV.

Vote

In this connection, the sound will be in monaural.

Remote sensor

Playing Back a Tape

Use the buttons on the camcorder as well as the buttons on the Commander. The Commander is useful when operating the camcorder from a distance. Be sure to select COMMANDER ON in the menu before operation. (See page 50.)

- When you use an optional wired remote commander, set to COMMANDER OFF.
- When you use the AC power adaptor, set the CHARGE/VTR selector to VTR.

Operation

(L-1)

- 1 Hold down the green button and slide the POWER switch to PLAYER.
- 2 Insert a cassette.
- 3 Turn on the TV and the VTR.
 - For a TV with video/audio input jacks: Set the TV/VIDEO selector to VIDEO.
 - For a TV without video/audio input jacks: Select the programme position for playing back the camcorder.
- 4 Press ▷.
 Playback starts.
 The ▷ on the camcorder can also be used.

To view a still picture
Press II during playback.

To resume playback
Press > or | | again.

To stop playback Press □.

To rewind the tape
Press
and then

To advance the tape rapidly Press □ and then ▶▶.

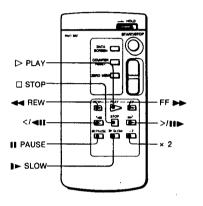

After playback

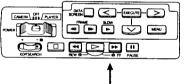

Set the POWER switch on the camcorder to OFF and the CHARGE/VTR selector on the AC power adaptor to STANDBY.

Notes

- When the still picture lasts for 5 minutes or more, the camcorder automatically enters the stop mode.
- This camcorder plays back a tape recorded in the SP and LP mode. The playback mode is automatically switched depending upon the mode of the recorded tape inserted.

(L·2)

Various Playback Modes

(L-2)

To view a still picture (playback pause)
Press II during playback.
II ◄ or ▶II appears in the viewfinder.
To resume normal playback, press ▷ or III.

To change the playback direction

Press </ail for the reverse or III>/> for the forward direction during playback.

- × 1 or × 1 appears in the viewfinder.

To resume normal playback, press >.

To view the picture at 1/5 speed (slow playback)

Set the playback direction with </◄II or III►/>, and then press I► during playback. ◄I or I► appears in the viewfinder. When slow playback lasts for 1 minute or more, forward or reverse playback at normal speed starts automatically, according to the tape direction.

To resume normal playback, press >.

To view the picture at double speed (Commander only)

Set the playback direction with </◀II or III or III or All or III or II

To view the picture frame-by-frame

Press </◄II or II►/> in the still picture mode. Each press of the button moves the picture one frame. ◄II or II► appears in the viewfinder momentarily. If you keep pressing </◄II or II►/>, playback at 1/25 speed starts. To resume normal playback, press [>.

To locate the desired scene — Picture search Keep pressing ◀◀ or ▶► during playback in the still picture mode. ⊕ or ⊕ appears in the viewfinder.

To resume normal playback, release the button.

To locate the desired scene quickly — Skip scan

Press ◀ while rewinding or ▶ while advancing the tape rapidly. ⊕ or ⊕ appears in the viewfinder.

To resume normal playback, press \triangleright .

Notes during the various playback

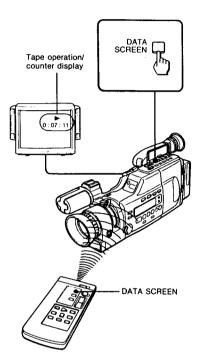

- Sound can be heard in the double speed forward playback.
- The sound has noise.
- With a stereo tape, the sound is heard in monaural.
- With a dual sound recorded tape, the main sound is heard.
- . Noise may appear in the still picture.
- Streaks may appear when playing back a tape recorded in the LP mode in the still, frame-byframe, or slow.
- The colour of the picture may change during still, frame-by-frame, slow or when using the ◄◄ or
 button.

If picture is noisy during frame-by-frame or slow playback

Adjust the picture referring to "PICTURE ADJUST menu" (page 51) while playing back the tape in slow speed.

However, the noise may not be completely eliminated.

(L-3)

Displaying the Information in the Viewfinder onto the TV Screen

(L-3)

Connect the camcorder and the TV properly and press the DATA SCREEN button. The indication in the viewfinder is superimposed on the TV screen. This function is convenient to monitor the indications in the viewfinder during menu operations or when the camcorder is remotely operated by the Commander.

To clear the indication Press the DATA SCREEN button again.

Note

When using the camcorder as a playback VTR during editing, be sure to clear the indications from the TV screen. Otherwise, the indications will be recorded with the picture.

Selecting the Monitor Sound

(L-4)

The playback sound can be selected by the menu.

Refer to "Using the Menu for Playback or Editing" (page 50) for details.

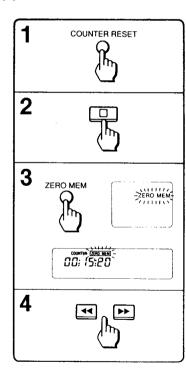

When playing back a dual sound recorded tape Normally set the HIFI SOUND setting to STEREO. When the dual sound recorded tape is played back, select 1 or 2 to hear the desired sound.

Note

Always return the setting to STEREO. Otherwise, the tape recorded in stereo will not be played back properly.

Note on PCM recording and playback
This camcorder cannot perform PCM recording or
playback.

(M)

Using the Tape Counter

The counter in the viewfinder and the display window indicates the elapsed time of the recording or playback.

To Index the Entire Tape

Press the COUNTER RESET button at the beginning of the tape so that the counter shows "0:00:00".

Write down the counter reading at a particular point so that you can easily find that point later by referring to the tape counter.

To Return to a Pre-registered Point

M)

- 1 During playback, press the COUNTER RESET button at the point to be located later.
- 2 Press
 when the playback is finished.
- 3 Press the ZERO MEM button.
 The "ZERO MEM" indication blinks in the viewfinder and the display window.
- 4 Press or ▶►.
 The tape rewinds or advances and stops automatically when the counter reaches approximately "0:00:00".

To cancel the ZERO MEM function Press the ZERO MEM button.

Notes on the counter and the ZERO MEM button

- The counter reading and the actual point on the tape may not correspond exactly. Use the counter as a guide. There will be a lag of several seconds especially when fast-forward and rewind operation is repeated or when playing back a tape with both the SP mode and LP mode recording.
- Be sure to press the ZERO MEM button after the tape stops. It does not function during recording or playback.
- The ZERO MEM mode is automatically canceled after each operation.

-26-

Using the Menu for Playback or Editing

MODE SET menu and PICTURE ADJUST menu can be used for playback or editing. In the MODE SET menu, various settings to further enjoy the features of the camcorder can be selected. In the PICTURE ADJUST menu, the picture in the still or slow mode can be adjusted.

MODE SET Menu

(N-1)

COMMANDER ON/OFF

- Select ON when using the supplied Remote Commander for playback or editing.
- Select OFF when you do not use the supplied Remote Commander, or when you use an optional wired Remote Commander for playback or recording.

EDIT ON/OFF

- Select ON when performing editing with the camcorder as the playback VCR to keep the degradation of picture resulting from editing to the minimum.
- · Select OFF otherwise.

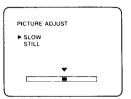

HIFI SOUND STEREO/ 1 /2

- Normally select STEREO. The tape recorded in AFM Hi-Fi stereo will be played back in stereo.
- Select 1 or 2 to play back the desired sound of the dual sound recorded tape.

Note

REC MODE SP/LP and HIB AUTO/OFF setting can be selected during camera recording.

(N-2)

PICTURE ADJUST Menu

(N-2)

How to Call Up the Menu Display

(N-3)

Example: To select EDIT OFF.

- 1 Set the POWER switch to PLAYER and insert a cassette.
- 2 Press the DATA SCREEN button to display the menu on the TV screen.
- 3 Press the MENU button. The MENU display appears.
- 4 Press v and move cursor to the desired item.
- 5 Press the EXECUTE button. The selected menu appears.
- 6 Press v and move cursor to the desired item.
- 7 Press < or > to select the desired setting.
- 8 Press the EXECUTE button. The setting is stored in the camcorder and the menu display is cleared from the viewfinder.

The setting is stored in the memory even if the POWER switch is returned to OFF or the battery pack is removed, as long as the lithium battery is installed.

To display another menu

Start from step 1 in "How to Call Up the Menu Display."

To return to the original screen Press the MENU button.

To make multiple settings within one menu After step 6 in "How to Call Up the Menu Display", press \vee and move cursor to the desired item.

To clear the indication from the TV screen Press the DATA SCREEN button again.

(0.1)

Manual Focusing

When the FOCUS switch is set to AUTO, the auto focusing functions to easily get a infocused picture under most shooting conditions. In the auto focusing function, the object is shot between 0.7 to 20 m away from the unit. But manual focusing is recommended under the following cases:

[a] to [f] corresponds to the illustrations. (O-1)

[a] Black objects which absorb the infrared beam

Ex. dark curtains or shade

[b] Objects in which the infrared reflection disperses

Ex. a smooth slanting surface (Auto focusing functions when the camera is aimed squarely at the subject.)

[c] Objects in which the infrared beam is reflected too much

Ex. traffic signs, a white wall, a mirror, or a subject through plate glass

[d] Objects not solid

Ex. fireworks, candle flame or smoke

[e] When there are other objects between the

shooting object and this unit

Ex. an animal inside a cage or baby inside a cot

[f] Moving objects

Ex. a crowd or sports with lots of movement

 Objects which emit infrared beams themselves

Ex. automatic doors or fluorescent lights

 Objects more than 20 meters away from the recorder

Especially with an overcast day, or at night.

When the auto focusing does not function momentarily

- . The camcorder is rapidly panned from a distant subject to a nearby subject with less contrast.

 • Shooting fast moving objects.

Some helpful hints

- · When shooting relatively dark places, such as indoors, the depth of field in proper focus is very
- . The figures on the focus ring indicate the distance between the object and the o mark on the camcorder.

The subjects in focus in the viewfinder in the auto focusing mode

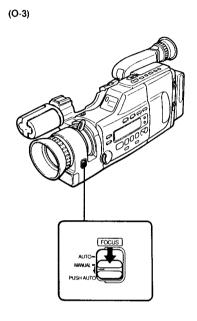

When shooting the subject at 3 m, the focusing point of the object in the viewfinder will be in the center. When the subject is more than 3 m away, objects a little to the upper left of the center tend to be in focus. When the subject is less than 3 m away, objects a little to the lower right of the center tend to be in focus. This tendency becomes apparent when shooting a subject at less than 1 m. (O-2)

Focusing Manually

(0-2)

- 1 Set the FOCUS switch to MANUAL. Check that the manual focus mark (E) appears in the viewfinder.
- 2 Turn the manual zoom lever fully to the telephoto position.
- 3 Turn the focus ring to achieve sharp focus.
- 4 Move the zoom lever to set to the desired shot length.

Shooting with Auto Focusing Momentarily

(O-3)

While shooting with manual focusing, press the FOCUS switch down (PUSH AUTO). The auto focus functions while you are pressing the FOCUS switch down.

When the switch is released, manual focusing will resume. Use this switch when focusing on one object to the other for natural focusing. Shutter speed, white balance, aperture, and/or programmed AE modes will be retained to the previous setting.

(P-1)

Adjusting the White Balance

In order to record the colour of the object as it is, the common method is to adjust the camcorder to record the white colour as white in various shooting conditions. This is accomplished by adjusting the white balance. When the AUTO LOCK switch is set to AUTO LOCK, the auto white balance function adjusts the white balance under most shooting conditions. But to record the colour of the subject more precisely, without being affected by the colour temperature of the ambient light, adjust the white balance manually.

[a] to [f] corresponds to the illustrations. (P-1)

	Conditions	Indication in the viewfinder
[a]	Lighting conditions change quickly	-&-
[b]	Too bright, such as in photograph studios	**
[c]	Monochromatic subject or background	4.24
[d]	Under a sodium lamp	-,∆-
	Under a mercury lamp	
	Under a colour matching fluorescent lamp	
[e]	Recording outdoors: a night view, neon signs, or fireworks	*
[f]	Recording outdoors: scenes after sunset or before sunrise	

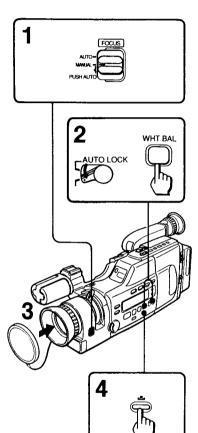

Adjusting the White Balance Manually

(P-2)

- 1 Set the AUTO LOCK switch down.
- 2 Set to the appropriate white balance mode by pressing the WHT BAL button. The indication changes in the order below each time the button is pressed.

No indication → № → ☆ → ☆ (auto)

(P-3)

Adjusting the White Balance Precisely

(P-3)

The one-push white balance function adjusts the white balance at the press of the button and maintains that condition. When the lighting condition changed or when recording subjects with different colour temperature, use the one push white balance function to achieve recording with natural colours without being affected by the ambient light.

- Set the FOCUS switch to MANUAL.
 The camcorder enters the manual focus mode.
- 2 Set the AUTO LOCK switch down and press the WHT BAL button to call up the dindication.

 The dindication is blinking slowly.
- 3 Attach the white lens cap to the camcorder and point it to a subject (outdoors) or to the light source (indoors).
- 4 Press the button in the recording standby mode.

 The button in the recording standby mode.
- The ♣ indication stops blinking to indicate that the new white balance is stored in the memory.

 The memory is retained for approximately 1 hour even if the POWER switch is set to OFF or if the battery pack is removed.

When recording under fluorescent light

- . Use the one push white balance function.
- Set the AUTO LOCK switch to AUTO LOCK.

(P-4)

Colour temperature (K)		Light source	
1	10,000	Clear sky	
Blue	-,	Slightly overcast	
1	7.000	Cloudy, rainy	
- 1	6,000	Flourescent lamp (daylight)	
1	5,000		
White		Direct sunlight	
1		Fluorescent lamp (daylight)	
- 1	4,000	1 hr. after/before sunrise/sunset	
	3,500	Fluorescent lamp (off-white) Studio lamp Halogen lamp	
- 1	3,200		
- 1	3,000		
Yellow		Tungsten lamp	
1	2,500	30 min. after/before sunrise/	
- 1		sunset	
Red		•	
	2,000	Sunrise/sunset	
•		Candlelight	

White Balance and Colour Temperature (P-4)

The colour temperature indicates the relative reddishness or bluishness of light measured in Kelvin degrees (K). It increases as the light source gets bluish and decreases as the light source gets redder. It has no direct relation with brightness of the light. The camcorder automatically adjusts the white balance within the range shown in the diagram on the left.

What the A indication means

- . Slow blinking: white balance not adjusted
- · Stops blinking: white balance adjusted

When the ♣ indication does not stop blinking
The white balance cannot be adjusted and the ♣ indication does not stop blinking.

- When the camcorder was pointed to an object that was not white.
- When white balance adjustment was attempted without the white lens cap.

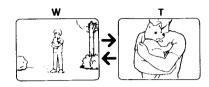

In these cases, point the camcorder to a bright light source or point the camcorder to a white object.

If the 🛂 indication still does not stop blinking Set the AUTO LOCK switch to AUTO LOCK.

When the lighting condition changed

- Readjust the white balance by the
 button during the recording standby mode. The
 button does not function during recording.
- The white balance adjustment is affected by the setting of the aperture and shutter speed. When the aperture or shutter speed is adjusted manually, and the camcorder was moved from indoors to outdoors or vice versa, the white balance setting may not be correct. In this case, set the AUTO LOCK switch to AUTO LOCK again and readjust the white balance automatically.

(Q-1)

(Q-1)

Zoomina

The size of the subject in the screen can be changed. Use "zoom-in" for dramatic close-ups and "zoom-out" for panoramic long shots. Also, use zooming during manual focusing. The camcorder's zoom button offers a variable speed zooming; pressing it firmly for high speed zooming and softly for relatively slow zooming.

Power Zooming — for Smooth and Constant Zooming

(Q-2)

Press the T side of the power zoom button for telephoto.

This gives a close up shot of an object far from the lens.

Press the W side of the power zoom button for wide.

This gives a broad view of the scene.

Manual Zooming — to Create a Dramatic Effect

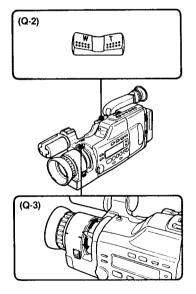

(Q-3)

Turn the manual zoom lever upward for telephoto and downward for wide.

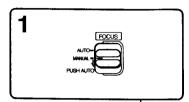

Focal length of this camcorder

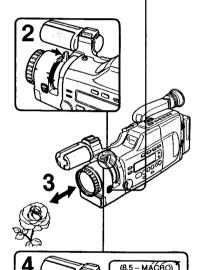

The focal length is 8.5 mm to 68 mm. This is approximately 46 mm to 368 mm converted to the focal length of a 35 mm camera.

Using the zoom button on the Commander Variable speed zoom cannot be operated with the zoom button on the Commander.

(R-1)

Close-ups (Macro)

Tiny objects such as flowers, insects, and images in photographs, can literally fill the screen using the close-up function. It is also useful when recording a title.

(R-1)

- 1 Set the FOCUS switch to MANUAL. Check that the manual focus mark ((E)) appears in the viewfinder.
- While pressing the green macro button, turn the zoom lever to the left as far as it will go into the MACRO range.
- 3 Bring the camcorder as close as necessary to the subject to obtain the desired subject size.

The subject can be as close to the lens surface as approximately 10 mm.

4 Turn the zoom lever within the MACRO range to focus sharply.

When you finish the close-up shooting Turn the zoom lever out of the MACRO range.

Notes

- Auto focusing does not function in macro shooting.
- If the object is closer than 10 mm, it cannot not be brought in focus.

If the lens hood touches the object (R-2)

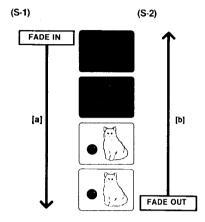

Remove the lens hood. Hold the focus ring and turn the hood by pressing it with your palm. Do the same when attaching or removing the filter or conversion lens (not supplied).

When you cannot come close to the object You can record a close-up picture between 0.7 to 1.3 m away from the object.

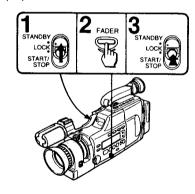

Turn the zoom lever to the telephoto end position.

Recommended accessory

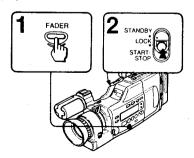

When shooting in macro, the depth of field is very shallow. Pay attention to focusing. To keep the object in focus, use a tripod.

(S-3)

(S-4)

Fade-in and Fade-out

When fading-in, the picture will gradually appear from a black screen. The sound will gradually increase in accordance with the picture. (S-1)

When fading-out, the picture will gradually disappear into a black screen. The sound will gradually decrease in accordance with the picture. (S-2)

Use this function to give a professional effect to your recording.

To Fade-in

(S-3)

- Slide the STANDBY switch up. The camcorder enters the recording standby mode.
- 2 Press the FADER button.
- 3 Press the START/STOP button.
 Fade-in is performed and recording starts.

To Fade-out

(S-4)

- 1 Press the FADER button while recording.
- 2 Press the START/STOP button to stop recording.

Fade-out is performed and then recording stops.

When does the FADER function work

The FADER function works only when the camcorder is in the recording standby mode or recording mode.

It does not function in the stop mode.

To cancel the fade-in/fade-out function before it is preformed

Press FADER before pressing START/STOP.

To use the fade-in/fade-out function repeatedly Start from step 1 each time.

When the title, date or time is displayed
The title, date or time does not fade-in or fade-out.

(T-1)

LOVE

LOVE

-34-

Recording a Title

(T-1

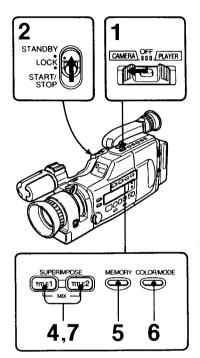

Original hand-lettered message or illustration can be superimposed over the picture. Two titles can be stored and 8 different colours can be used for the titles.

This function can be used during the following situations

- (1) During camera recording.
- (2) During playback.
- (3) During camera recording, superimpose a title. Then superimpose different titles during playback.
- (4) During editing, use the camcorder as a playback VTR. Titles can be superimposed over the playback picture (with or without a title superimposed) and then recorded together onto the recording VTR.

Before recording, playback, or editing, store the desired title in the camcorder.

(T-2)

Storing a Title

(T-2)

Before storing

- Prepare title cards.
 Use a plain, white card and draw titles in dark colour and thick lines. Street signs and printed materials with high contrast can be used as a title.
- Install the lithium battery (page 26).
 The titles cannot be kept in the memory unless the lithium battery is installed.

Operation

- 1 Hold down the green button and slide the POWER switch to CAMERA.
- 2 Slide the STANDBY switch up. The camcorder enters the recording standby mode.
- 3 Point the camcorder to the title card and adjust the focus.

 To focus on the title, use the macro function, (page 62).
- 4 Press the TITLE 1 or TITLE 2 button.
- 5 Press the MEMORY button. The title is stored to the button pressed in step 4.
- Press the COLOR/MODE button to select the colour of the title.

 Each time you press the button, the indication changes as follows.

WHT (white) → BLUE → GRN (green) → CYAN ↑

BLK (black) ← YEL (yellow) ← VIO (violet) ← RED

7 Press the TITLE 1 or TITLE 2 button, whichever was pressed in step 4, to clear the title from the viewfinder. The title is stored to that button until you store another one over it.

64

To check the title

Press the TITLE 1 or TITLE 2 button, whichever was pressed in step 4, in the standby mode. To clear the title from the viewfinder, press the same button again.

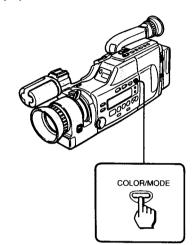

To store a new title

Repeat steps 1 to 7. A new title is stored to the TITLE 1 or TITLE 2 button and the previous title will be deleted from that button.

When storing a title in the memory

When a cassette is installed, the camcorder will return to the power off mode after 5 minutes. Take out the cassette if more than 5 minutes will be needed to store the title.

(T-3)

Function of the COLOR/MODE Button

(T-3)

The COLOR/MODE button works in two ways. When a title is displayed in the viewfinder, the colour of the title can be changed. When the title is not displayed, the title display mode can be changed.

To select the colour

1 Press the TITLE 1 or TITLE 2 button to display the title.

2 Press COLOR/MODE.

Each time the button is pressed, the colour indication changes as follows.

To select the display mode

1 If the title is displayed, press TITLE 1 or TITLE 2 button to clear the title.

2 Press COLOR/MODE.

Each time the button is pressed, the mode indication changes as follows.

- t: Scroll up the title.
- 1: Scroll down the title.
- : Reverse the title.
- 1 : Reverse the title and scroll it up.
- ■↓: Reverse the title and scroll it down.

Superimposing One Title

(T-4)

1 During playback or recording, press the TITLE 1 or TITLE 2 button at the point from which you want to use the title.

The title is displayed. During recording the title will be recorded on the tape. During playback the title will not be recorded on the tape.

2 Press the same button pressed in step 1 at the point you wish to clear the title.

When recording the title at the beginning We recommend the following method:

- 1 Set the camcorder in the standby mode.
- 2 Display the title by pressing the TITLE 1 or TITLE 2 button.
- 3 Release the standby mode.
- 4 Clear the title by pressing the same button as step 2.

When recording a title onto the playback picture

The title can be superimposed on the playback picture but cannot be recorded with this camcorder alone. Make connections for editing and record the picture with title superimposed on another VTR. (See page 101).

About the colour indication

- The colour indication in the viewfinder is not recorded.
- Even after the title is displayed, the colour can be changed by pressing the COLOR/MODE button.

When displaying the title in the playback mode. The title is cleared if you press ◄ or ▶▶, and appears again when normal playback resumes.

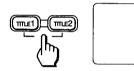

(T-5)

1

2

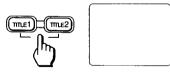

(T-6)

1

2

Layering One Title over the Other

The title stored in the TITLE 1 button and the TITLE 2 button can be displayed at the same time with one title layered on the other.

Example: When a blue heart is stored in the TITLE 1 button and a white title "LOVE" is stored in the TITLE 2 button.

To display TITLE 1 in the background and TITLE 2 in the foreground (T-5)

- 1 During playback or recording, hold down the TITLE 1 button and press the TITLE 2 button.
- 2 Press the TITLE 1 or TITLE 2 button at the point you wish to clear the title.

To display TITLE 2 in the background and TITLE 1 in the foreground (T-6)

1 During playback or recording, hold down the TITLE 2 button and press the TITLE 1 button.

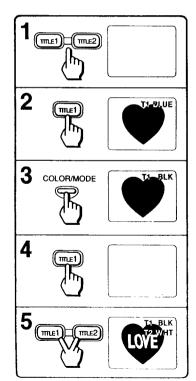

In this case, TITLE 2 "LOVE" is hidden behind TITLE 1 and is not seen. Before using this function, check whether the title stored in the memory is appropriate for this application.

2 Press the TITLE 1 or TITLE 2 button at the point you wish to clear the title.

(T-8)

To Change the Colour of the Title after Layering One Title over the Other

Example: When a blue heart is stored in the TITLE 1 button and a white title "LOVE" is stored in the TITLE 2 button.

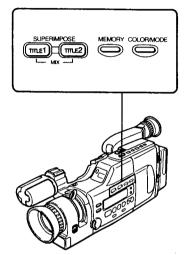

To change the colour of the title in the foreground (T-7)

Press the COLOR/MODE button. Each press of COLOR/MODE will change the colour of "LOVE".

To change the colour of the title in the background (8-T)

- 1 Press the TITLE 1 or TITLE 2 button to clear the title.
- 2 Press the TITLE 1 button. TITLE 1, blue heart, is displayed.
- 3 Press the COLOR/MODE button to change the colour of TITLE 1. The colour of TITLE 1, blue heart, changes.
- 4 Press the TITLE 1 button. TITLE 1, black heart, is cleared from the picture frame.
- 5 Hold down the TITLE 1 button and press the TITLE 2 button.

(T-9)

Various Title Display Modes

Follow the steps below to enjoy the various title display modes.

(T-9)

During camera recording or playback, press the COLOR/MODE button to select the title display modes. Refer to the following page for the available modes.

Step 2

Call up the title.

To display one title:

Press the TITLE 1 or TITLE 2 button. To layer one title over the other: Call up the title referring to page 69.

Step 3

Clear the title.

When one title is displayed:

Press the same button pressed in step 2.

When one title is lavered over the other:

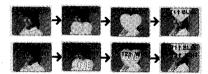

Press either the TITLE 1 or TITLE 2 button.

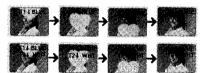

(T-11)

(T-12)

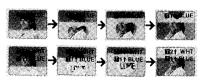

(T-13)

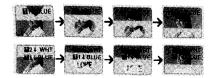

(T-14)

(T-15)

Title display modes

Each time you press the COLOR/MODE button in step 1 (page 71), the title display modes changes in the following order.

. Normal title display (T-10)

• Scrolling up the title (T-11)

Step 1: The † indication is displayed.

Step 2: The title is scrolled upwards to the center and stops.

Step 3: The title is scrolled up and out of the picture frame.

. Scrolling down the title (T-12)

Step 1: The 1 indication is displayed.

Step 2: The title is scrolled downwards to the center and stops.

Step 3: The title is scrolled down and out of the picture frame.

· Reversing the title with the picture (T-13)

Step 1: The III indication is displayed.

Step 2: The reversed title is displayed.

Step 3: The title is cleared from the picture frame.

. Scrolling up the reversed title (T-14)

Step 1: The thindication is displayed.

Step 2: The reversed title is scrolled upwards to the center

Step 3: The reversed title is scrolled up and out of the picture frame.

. Scrolling down the reversed title (T-15)

Step 1: The 11 indication is displayed

Step 2: The reversed title is scrolled downwards to the center.

Step 3: The reversed title is scrolled down and out of the picture frame.

To scroll up or down through the picture frame Press the TITLE 1 or TITLE 2 button twice successively. The title does not stop on the center, but is scrolled up or down and out of

the picture frame.

When displaying one title over the other

- TITLE 1 and TITLE 2 cannot be called up in the different title display mode at the same time.
 For example, calling up TITLE 1 in the reverse mode and TITLE 2 in the scroll up mode at the same is not possible.
- When scrolling the two titles layered, press the second title button before the first title starts to scroll.

Note on scrolling

You can scroll the title only when the camcorder is in the recording standby, recording, or normal playback mode. Only normal title display mode (no indication) and reverse title display mode () can be performed during modes other than the three above. (Refer to "Various Playback Modes" on page 45) If you select the scroll mode first, and then set the camcorder to the modes other than the three above, the scroll mode will be canceled automatically.

Recording a Picture Using Programmed AE and Manual Modes

(U-1)

ADDITION OF TALES OF TA

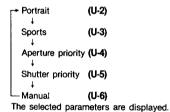

Viewfinder	D:
viewtinger	Display window
(U-2)	
*	a
(U-3)	
(U-4)	
Example AE A 425 F8	
(U-5)	
Example AE S 425 F8	S 1 1 1
(U-6)	
No indication	No indication

(U-1)

A variety of camera recording modes can be selected for this camcorder, from the full automatic mode to the programmed AE mode in which camera recording modes most suited for the subject and/or the condition is adjusted automatically. In addition, the manual mode enables independent setting of the exposure value and shutter speeds. Setting of a single parameter or a combination of two parameters at one time is possible.

Camera Recording Modes Available

With the AUTO LOCK switch set down, each press of the PROGRAM AE button changes the camera recording mode as follows.

During programmed AE and manual modes Focus and white balance can be adjusted independently from the programmed AE mode or the manual mode. Manual adjustment of focus and white balance is recommended.

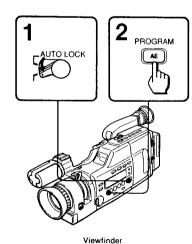

How to use the CONTROL dial (U-7)

Move the dial slowly using the tip of your index finger. If the dial is released immediately after holding it to the maximum position, the sound of the dial returning to the normal position may be recorded.

When recording in the aperture priority mode or the manual mode

Do not point the lens at the sun or other light sources when the aperture value is set to F1.4.

(V-2)

åå

Display window

Portrait Mode

(V-1)

In the portrait mode, the subject is in focus and the background is out of focus. The aperture (opening of the iris) and the shutter speed is automatically adjusted to maintain the appropriate exposure according to the size and brightness of the subject. The portrait mode is most effective when used outdoors.

Portrait Mode Applications

- To shoot a subject with not much movement, such as a portrait of a person or a close up of a flower.
- To zoom in a subject with the telephoto mode.
- To shoot a subject with an obstruction in the foreground.

Operation

(V·2)

- 1 Set the AUTO LOCK switch down.
- 2 Press the PROGRAM AE button until the indication is displayed in the viewfinder and the display window.

The camcorder enters the portrait mode.

To return to the full automatic mode Set the AUTO LOCK switch to AUTO LOCK.

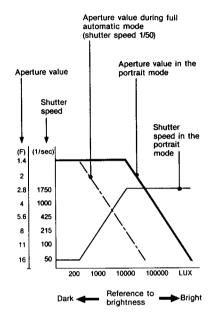

To enter other programmed AE modes from the portrait mode

Press the PROGRAM AE button to display the desired programmed AE mode.

When recording in the portrait mode

Focus and white balance can be adjusted manually. See page 55 (focus) and page 58 (white balance) for details.

(V-3)

Hint for effective camera work

Use of the portrait mode with the following method will gradually make the background out of focus while keeping the subject in focus.

- 1 Enter the portrait mode referring to page 76.
- 2 Set the AUTO LOCK switch to AUTO LOCK and start recording.
- 3 Set the AUTO LOCK switch down.
 The camcorder will enter the portrait mode and make the background out of focus.

The theory of the portrait mode (V-3)

When shooting outdoors under bright sunlight in the full automatic mode, the aperture tends to close and both the subject and the background comes into focus (deep depth of field). This is a result of excessive light. In order to bring the subject in focus and keep the background out of focus (shallow depth of field), the aperture should be opened. In the portrait mode, the aperture is controlled to open by automatically selecting the shutter speed (between 1/50 to 1/1750 that matches the shooting situation) to maintain the appropriate exposure.

When recording under fluorescent, sodium, or mercury lamps

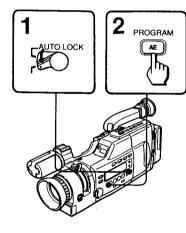

- The brightness of the recorded picture may flicker.
- . The colour of the recorded picture may vary.

76

(W-1)

(W-2)

Viewfinder

Display window

Sports Mode

(W-1)

By recording in the sports mode, a subject moving at high speed can be recorded and the picture can be observed more clearly with less picture shaking in the still or slow mode compared to the full automatic mode. The shutter speed and the aperture is automatically adjusted to maintain the appropriate exposure according to the speed of the subject.

Sports Mode Applications

- To shoot outdoor sports scenes, such as football, tennis, and golf.
- To shoot the scenery from inside a moving automobile.

Operation

(W-2)

- 1 Set the AUTO LOCK switch down.
- 2 Press the PROGRAM AE button until the similarities indication is displayed in the viewfinder and the display window.

The camcorder enters the sports mode.

To return to the full automatic mode
Set the AUTO LOCK switch to AUTO LOCK.

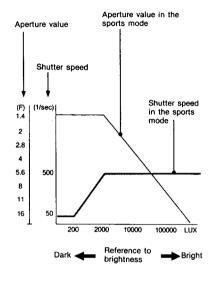

To enter other programmed AE modes from the sports mode

Press the PROGRAM AE button to display the desired programmed AE mode.

When recording in the sports mode

Focus and white balance can be adjusted manually. See page 55 (focus) and page 58 (white balance) for details.

(W-3)

Hint for effective camera work

When shooting athletic matches from a distance, such as a football game, we tend to zoom from the wide to the telephoto position to catch the once-only events. Even under these circumstances, by using the sports mode, a sharp picture without camera wobble can be obtained when played back later in the slow or still mode.

The theory of the sports mode (W-3)

When the shutter speed is shifted to a faster speed, subjects moving at high speed, such as a tennis racket or golf club, can be recorded and then played back clearly with less picture shaking compared to the full automatic mode. With this camcorder, the shutter speed can also be set independently from the aperture. However, the picture may become dark when the lighting condition is insufficient. In the sports mode, the fastest shutter speed that matches the shooting situation (between 1/50 and 1/500) is selected to maintain the appropriate exposure.

Note

The sports mode is effective under sufficient lighting, such as under sunlight. When used under extremely dark conditions, the shutter speed may not be shifted to high speeds.

When recording under fluorescent, sodium, or mercury lamps

- The brightness of the recorded picture may flicker.
- · The colour of the recorded picture may vary.

Aperture Priority Mode

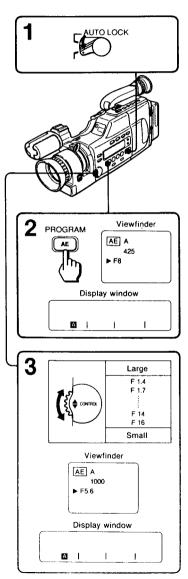

(X-1)

The aperture priority mode enables to select the aperture which determines the depth of field. 15 aperture values, from F 1.4 to F16, can be selected. The shutter speed is automatically set (between 1/50 to 1/1750) in combination with the aperture value to maintain the appropriate exposure.

Aperture Priority Application

To shoot the picture with different depths of field.

(X-2)

Operation

(X-2)

- 1 Set the AUTO LOCK switch down.
- 2 Press the PROGRAM AE button until the AE A indication is displayed in the viewlinder and A in the display window. The camcorder enters the aperture priority mode
- 3 Move the CONTROL dial to set to the desired aperture value.

 The selectable aperture values are:

F1.4, F1.7, F2, F2.4, F2.8, F3.4, F4, F4.8, F5.6, F6.8, F8, F9.6, F11, F14, F16

The shutter speed indication corresponds to the change of the aperture value.

To return to the full automatic mode
Set the AUTO LOCK switch to AUTO LOCK.

To enter other programmed AE modes from the aperture priority mode Press the PROGRAM AE button to display the

desired programmed AE mode.

When recording in the aperture priority mode Focus and white balance can be adjusted manually.

See page 55 (focus) and page 58 (white balance) for details.

Hints for effective camera work

. Understanding the depth of field

The depth of field is the area in which the objects are in focus. A shallow depth of field shows the subject in focus and the background out of focus. The greatest depth of field shows everything in focus.

· Depth of field and aperture value

A large aperture provides a shallow depth of field and a small aperture provides a deep depth of field.

Depth of field and object-to-camera distance
 When the object-to-camera distance is near,
 the depth of field will be shallow. When the object-to-camera distance is far, the depth of field will be great.

. Depth of field and zooming

The depth of field will be shallow in the telephoto position. The depth of field will be great in the wide position.

Summary

	A shallow depth-of-field	A deep depth-of-field
Aperture	Towards open	Towards closed
Object-to-camera distance	Near	Far
Zoom	Telephoto	Wide

When the ▶ indication in the viewfinder is blinking The lighting condition is insufficient or excessive for the aperture priority mode. In this case, move the CONTROL dial and readjust the aperture.

- Insufficient light (when the picture inside the viewfinder is dark)
- Change the aperture towards F1.4.
- Excessive light (when the picture inside the viewfinder is too bright)
 Change the aperture towards F16.

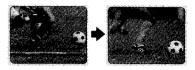

Although we recommend camera recording without the \blacktriangleright indication blinking, camera recording can be performed even when the \blacktriangleright indication is blinking. Check the picture in the viewfinder before recording.

When recording under fluorescent, sodium, or mercury lamps

- The brightness of the recorded picture may flicker.
- The colour of the recorded picture may vary.

Shutter Priority Mode

(Y-1)

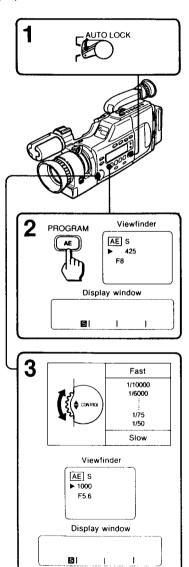

(Y-1)

The shutter priority mode enables selection of the shutter speed. 16 shutter speeds can be selected from 1/50 (normal speed) to 1/10000. When a fast shutter speed is selected, subjects moving at high speed can be recorded and the picture can be observed more clearly with less picture shaking in the still or slow modes compared to slower shutter speeds. The aperture value is automatically set (between F1.4 to F16) in combination with the shutter speed to maintain the appropriate exposure.

Shutter Priority Applications

- To shoot a golf swing or a tennis match with the tennis ball captured clearly.
- When you wish playback certain scenes with high speed movements in a clear, sharp picture.

(Y-2)

Operation

(Y-2)

- 1 Set the AUTO LOCK switch down.
- 2 Press the PROGRAM AE button until the AE S indication is displayed in the viewfinder and S in the display window. The camcorder enters the shutter priority mode.
- 3 Move the CONTROL dial to set to the desired shutter speed.

The selectable shutter speeds are: 1/50, 1/75, 1/100, 1/120, 1/150, 1/215, 1/300, 1/425, 1/600, 1/1000, 1/1250, 1/1750, 1/2500, 1/3500, 1/6000, 1/10000

The aperture value indication corresponds to the change of the shutter speed.

To return to the full automatic mode Set the AUTO LOCK switch to AUTO LOCK.

To enter other programmed AE modes from the shutter priority mode

Press the PROGRAM AE button to display the desired programmed AE mode.

When recording in the shutter priority mode

Focus and white balance can be adjusted manually. See page 55 (focus) and page 58 (white balance) for details.

Hints for effective camera work

Refer to the chart below for the appropriate shutter speed for the object. Check the brightness of the picture in the viewfinder.

When to use	Recommended speed
On clear days, recording golf or tennis scenes. (To view the hit ball clearly in the slow or still mode, select shutter speeds between 1/1000 to 1/4000) Recording the skiers.	1/10000 to 1/600
On overcast days, recording a moving merry-go-round or a roller coaster. Recording outdoors stably from inside a moving automobile. General athletic scenes, marathon, etc.	1/425 to 1/150
Used in place of the ND2 filter to reduce the exposure to approximately 1/2. Recording indoors for stable recording.	1/120
Recording under bright sunlight. To avoid out-of-focus pictures while recording with small aperture.	1/100 to 1/75

When the ▶ indication in the viewfinder is blinking The lighting condition is insufficient or excessive for the shutter priority mode. In this case, move the CONTROL dial and readjust the shutter speed.

Although we recommend camera recording without the ▶ indication blinking, camera recording can be performed even if the ▶ indication is blinking. In this case, check the picture in the viewfinder before recording.

When is shutter speed 1/50 indicated?

1/50 indication is displayed only when the shutter speed is set to 1/50 using the CONTROL dial. Even though the shutter speed is set to 1/50 during the full automatic mode, the indication will not be displayed.

When the shutter speed is set 1/215 or faster Try to shoot under sunlight outdoors, and with the video light indoors.

When shooting a very bright object

A vertical band (smear) may appear on the screen if shot at high speeds.

When the shutter speed is changed when shooting a TV screen

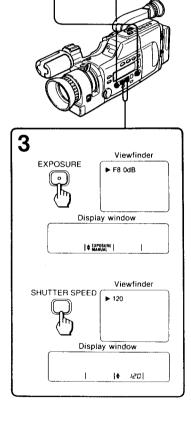

The brightness of the recorded picture may vary.

When recording under fluorescent, sodium, or mercury lamps

- The brightness of the recorded picture may flicker.
- · The colour of the recorded picture may vary.

(Z-1)

AUTO LOCK

Manual Mode

In the manual mode, independent setting of the exposure (aperture value/gain level) and shutter speeds can be performed. Setting of a single parameter or a combination of two parameters at one time is possible.

Setting One Parameter

(Z·1)

PROGRAM

- 1 Set the AUTO LOCK switch down.
- 2 Press the PROGRAM AE button until nothing is indicated in the upper left hand corner of the viewfinder.

The camcorder enters the manual mode.

At this point, the shutter speed is set to 1/50, the exposure (aperture/gain) are automatically adjusted to the shooting condition.

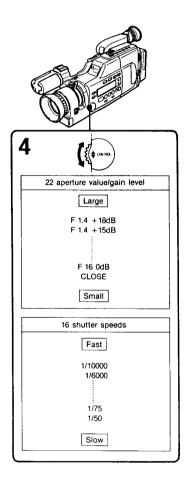

3 Press the button of the parameter to be set.

To set the exposure (aperture/gain) value Press the EXPOSURE button. The exposure (aperture/gain) is set to the value at the instant the button was pressed.

To set the shutter speed

The first press of the SHUTTER SPEED button sets the shutter speed to 1/120 speed and the second press sets it to 1/1000. To set to other speeds, go to step 4.

Continued on the next page

4 Select the desired setting by the CONTROL dial.

The indication in the viewfinder changes as shown in the illustration and below.

Selectable aperture value/gain level F1.4/+18dB, F1.4/+15dB, F1.4/+12dB, F1.4/+9dB, F1.4/+6dB, F1.4/+3dB, F1.4/0dB, F1.7/0dB, F2/0dB, F2.4/0dB, F2.8/0dB, F3.4/0dB, F4/0dB, F4.8/0dB, F5.6/0dB, F6.8/0dB, F8/0dB, F9.6/0dB,

F14/0dB, F16/0dB, CLOSE
Selectable shutter speeds

1/50, 1/75, 1/100, 1/120, 1/150, 1/215, 1/300, 1/425, 1/600, 1/1000, 1/1250, 1/1750, 1/2500, 1/3500, 1/6000, 1/10000

Note on the exposure indication

When recording indoors, the exposure indication may be F2 +3dB. This indicates that the gain level has increased while the aperture value is not F1.4 (open). This adjustment can only be made in the automatic mode. You cannot make such an adjustment in the manual mode.

To return to the full automatic mode Set the AUTO LOCK switch to AUTO LOCK.

To enter other programmed AE modes from the manual mode

Press the PROGRAM AE button to display the desired programmed AE mode.

When recording in the manual mode

Focus and white balance can be adjusted manually. See page 55 (focus) and page 58 (white balance) for details

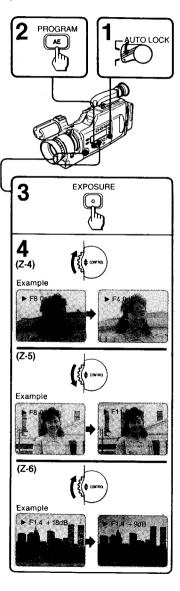

The buttons pressed and the indication in the viewfinder (Z-2)

When the EXPOSURE button is pressed
 The camcorder indicates the aperture value/gain level that was last detected when the camcorder was controlling the exposure automatically. At the same moment, the exposure is locked to the indicated level.

When the SHUTTER SPEED button is pressed

The first press of this button sets the camcorder to the 1/120 shutter speed. The second press sets the camcorder to the 1/1000 shutter speed. For a quick access to the desired shutter speed, first press the button and set to the shutter speed whichever is closer to the desired speed and then turn the CONTROL dial.

(Z-3)

Exposure Control Applications

(Z-3)

Adjust the exposure when there is an extreme difference in the brightness between the subject and the background.

This camcorder automatically raises the gain level to capture the subject clearly when the shooting condition is dark. Due to this function, the recorded picture may seem brighter than the actual shooting condition. In these cases, set the gain level to reproduce the actual atmosphere.

- 1 Set the AUTO LOCK switch down.
- 2 Press the PROGRAM AE button until nothing is indicated in the upper left hand corner of the viewfinder.

The camcorder enters the manual mode.

At this point, the shutter speed is set to 1/50, the aperture and gain are automatically adjusted to the shooting condition.

- 3 Press the EXPOSURE button.
- 4 Move the CONTROL dial to set the aperture/gain to the appropriate value.

Illumination from behind the subject and opposite the camera (Back light) (Z-4)

Move the CONTROL dial up to decrease the aperture value.

Illumination too strong

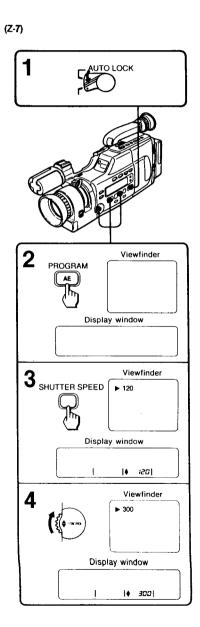

(2-5

Move the CONTROL dial down to increase the aperture value.

Shooting the picture in the dark effectively (Z-6)

Move the CONTROL dial down to lower the gain level.

When the gain level is too high The picture may become distorted.

Setting Multiple Parameters

(Z-7)

Example: To set the shutter speed to 1/250, aperture value to F4 0dB.

- 1 Set the AUTO LOCK switch down.
- 2 Press the PROGRAM AE button until nothing is indicated in the upper left hand corner of the viewfinder.

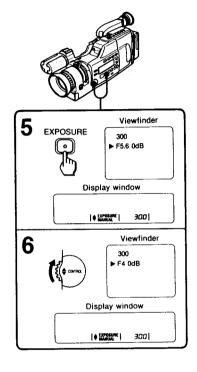

The carncorder enters the manual mode.

At this point, the shutter speed is set to 1/50, the aperture and gain are automatically adjusted to the shooting condition.

- 3 Press the SHUTTER SPEED button.
- 4 Move the CONTROL dial and set the shutter speed to 300.

To set the shutter speed only, the setting is completed here.

Continued on the next page

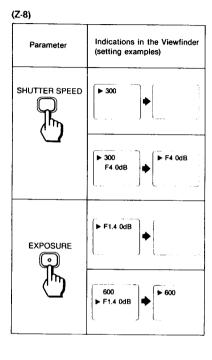

- 5 Press the EXPOSURE button.
- 6 Move the CONTROL dial and set the aperture value to F4 0dB.

Camera recording will be performed under this setting even when the shooting condition changes.

To return to the full automatic mode Set the AUTO LOCK switch to AUTO LOCK.

Which parameter to be set first

Setting can be performed from either parameter. Press the button of the desired parameter. The indication when the button is pressed is the same as those explained in page 90.

To change the setting

- Parameter with the Indication:
 Move the CONTROL dial to change the setting.
- Parameter without the ▶ indication:
- 1 Press the button of the desired parameter to move the indication to that parameter.
- 2 Then move the CONTROL dial to change the setting.

To quit the setting (Z-8)

Parameter with the ▶ indication:

Press the button of that parameter to erase the indication from the viewfinder.

Parameter without the ▶ indication:

- 1 Press the button of the parameter to be erased to move the ▶ indication to that parameter.
- 2 Then press the same button to erase that parameter from the viewfinder.

When the parameter is erased

The adjustment of that parameter will be as follows.

- . Shutter speed: Locked to 1/50.
- Aperture value/gain level: Automatic adjustment

(Z-9)

(= 0)				
	Expo	Shutter		
	Aperture value	Gain level	speed	
Selectable steps	15 steps	7 steps	16 steps	
Variation of exposure (in terms of EV steps)	0.5 EV steps	0.5 EV steps	0.5 EV steps	
Towards bright (+ EV) Towards dark (- EV)	F1.4	+18 dB	1/50	

Advanced Application of the Manual Mode

The manual adjustment function offers an advanced video camera recording technique by controlling the exposure with the balance of shutter speed, aperture value and gain level.

Understanding the relation between aperture value, shutter speed, and gain

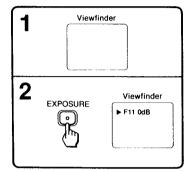

Exposure is measured in the units of Exposure value (EV). In this camcorder, the total EV can be varied or kept at a constant level by controlling the balance of the parameters.

Refer to the chart on the left (Z-9) for an overview of the relation between aperture value, gain level, and shutter speed of this camcorder.

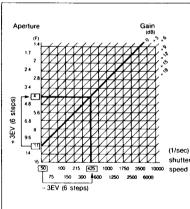

The relation between exposure and the aperture, gain, and shutter speed can be concluded as:

	Exposure	+	Shutter
(Exposure	(aperture/gain)		speed control
value)	control		

(Z-10)

(Z-11)

Example: To change the setting without changing the exposure (7-10)

(Z·10)

1 Set the camcorder to the manual mode referring to page 92.

2 Press the EXPOSURE button.

The setting at this point becomes the basic reference to perform the following setting.

Let's set the exposure at this point at 0 EV.

0 EV = Exposure + Shutter (aperture/gain) speed control control

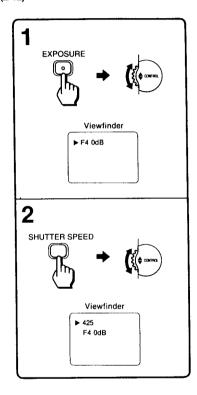

In order to maintain the same exposure, the total exposure should be kept to 0 EV in any case.

3 Refer to the diagram (Z-11) to choose the setting.

The diagram shows the relation between aperture, gain, and shutter speed.

Setting in step 2 (on page 97)
Aperture value: F11
Gain level: 0dB
Shutter speed: 1/50

Vertical axis: Aperture value in 0.5EV/step Diagonal axis: Gain level in 0.5 EV/step Horizontal axis: Shutter speed in 0.5EV/step (Z-12)

To set the aperture to F4 without changing the exposure (Z-12)

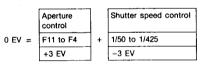

1 Press the EXPOSURE button and move the CONTROL dial to set the aperture to F4. When shifting the aperture from F11 to F4, the exposure becomes 6 steps brighter. This means that in terms of EV, the total exposure becomes +3 EV. In order to keep the total exposure to 0 EV, reduce the exposure by 3 EV with shutter speed.

2 How it works:

What is required here is to reduce the exposure by 3 EV, i.e. 6 steps, by shifting the shutter speed from 1/50 to 1/425.

Operation:

Press the SHUTTER SPEED button and move the CONTROL dial to set the shutter speed to 1/425.

Conclusion

To change the setting while having the same total exposure, change the exposure (aperture/gain) and shutter speed by the same numbers of steps.

Example 1: When you increase the exposure (aperture/gain) by 6 steps, increase the shutter speed by 6 steps.

Example 2: When you reduce the exposure (aperture/gain) by 3 steps, slow down the shutter speed by 3 steps.

Hint for effective carnera work

Gain can be used in terms of film sensitivity of a still camera.

Notes

- When shooting outdoors, the brightness of the object may change due to the change of weather.
- When the shooting condition changes, resetting of the parameters is recommended.

VIDEO -

(yellow)

Custom Preset Function

The camcorder can be preset to record the picture with the desired colour and hue. Adjust the camera, if necessary, after making several trial recordings.

Connections

(AA-1)

S VIDEO

When using the custom preset function, adjust the picture by shooting a subject and checking the picture on a TV or a monitor.

- 1 Connect the camcorder and the TV or monitor referring to the illustration.
- 2 Set the TV/VIDEO selector on the TV or monitor to VIDEO.

Understanding the setting in the CUSTOM PRESET menu

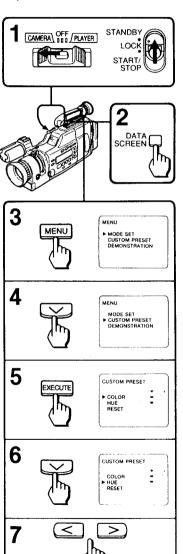

The custom preset function is effective only when the tape recorded in the CUSTOM PRESET mode is viewed on the TV or monitor that was connected to the camcorder at the time of the setting.

Therefore, the tape may not reproduce the picture in the expected colour or hue, when played back on a different TV or monitor.

Note

For details on the TV, refer to the operating instructions of the TV.

(AA-2)

Operation

(AA-2)

1 Set the POWER switch to CAMERA and slide the STANDBY switch up.

The camcorder enters the recording standby mode.

In order to adjust the picture precisely, adjust the focus and white balance manually.

- 2 Press DATA SCREEN to display the CUSTOM PRESET menu indication in the viewfinder on the TV or monitor screen.
- 3 Press MENU.

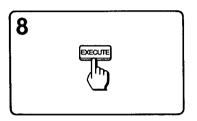

COLOR.

- 4 Press v and move cursor to CUSTOM PRESET.
- 5 Press EXECUTE. The CUSTOM PRESET menu is displayed.
- 6 Press v and move cursor to the item to be adjusted.
 Each press of v moves the cursor to the item below. When the cursor is at RESET, press v again to move the cursor to
- 7 Press < or > to adjust the picture shot by the camera by monitoring it on the TV or monitor screen.

Three steps each from the standard position can be selected.

Parameter	Function	+ -	▼ +→
COLOR	To adjust the colour intensity	Lighter	Stronger
HUE	To adjust the hue	Purplish	Greenish

Continued on the next page

8 Check the cursor is not set to RESET and press EXECUTE.

The CUSTOM PRESET menu is cleared and the new setting is stored in the memory.

To record in the setting made in the CUSTOM PRESET menu

- 1 Set the camcorder in the recording pause mode.
- 2 Call up the MODE SET menu referring to page 52.
- 3 Select "CUSTOM MODE ON".
- 4 Press EXECUTE.
- 5 Set the AUTO LOCK switch down. The CP (custom preset mode) indication is displayed in the viewfinder.
- 6 Press START/STOP to start recording.

After recording

Reset the AUTO LOCK switch to AUTO LOCK. The Principle indication disappears, but the settings of the parameters remain.

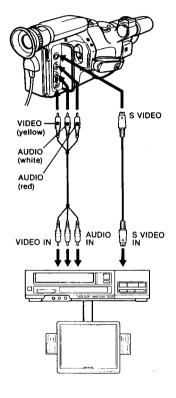

To return to the standard setting

Set cursor to RESET in step 6 of "Operation" (page 99) and press EXECUTE.

The CUSTOM PRESET menu is cleared. All of the parameters will be at the standard position the next time it is called up.

Note

The effect of the CUSTOM PRESET function may not be apparent depending upon the brightness, pattern, and colour of the subject. (BB)

Editing onto Another VTR

You can create your own video programme by editing with any other 8 mm [3], Betamax [6], or VHS VHS format VTR.

Before You Begin

- Make connections using the supplied A/V connecting cable for stereo equipment.
 For monaural equipment, connect only the white plug for audio and select "HIFI SOUND 1" in the menu. See "Selecting the Monitor Sound" on page 48.
- Use of the supplied AC power adaptor is recommended.
- Select "EDIT ON" in the MODE SET menu. See page 50.
- Press DATA SCREEN to clear the indication from the viewfinder. Otherwise, the indication will be recorded together with the picture on the recording VTR.
- Set the input selector of the VTR to LINE, if available.

Operation

- 1 Insert a tape for recording into the recording VTR.
- 2 Set the POWER switch on the camcorder to PLAYER and insert a source tape.
- 3 Playback the tape on the camcorder and locate the editing start point. Then set the camcorder to the playback pause mode.
- 4 Playback the tape on the recording VTR and locate the recording start point. Then set the VTR to the recording pause mode.
- 5 Release the pause mode on both VTRs. Editing starts.

To stop editing momentarily Press II on the recording VTR.

To edit more scenes Repeat steps 3 to 5.

To stop editing
Press □ on both VTR.

To record a title

Use the camcorder as a player. Playback the tape and call up the title in the desired mode. The played back picture will be recorded on the recording VTR with the title superimposed. For details on the title, refer to pages 64 to 73.

Note on edit function

When using the camcorder as the playback VTR, selecting the "EDIT ON" in the MODE SET menu activates the edit function. Picture deterioration resulting from editing can be kept to the minimum. However, avoid using the edited tape for multiple generations of editing.

Deactivate the edit function when not editing.

(CC-1)

(CC-2)

Notes and Precautions

Notes on Moisture Condensation

If the camcorder is brought directly from a cold place to a warm place, moisture may condense inside the camcorder, on the surface or the tape, or on the lens. In this condition, the tape may stick to the head drum and be damaged or the unit may not operate correctly. To prevent possible damage under these circumstances, the camcorder is furnished with moisture sensors.

However, take the following precautions.

If moisture condenses inside the unit (CC-1)

Moisture is present inside the camcorder when the **1** and **△** indications in the viewfinder blink. In this case, no function except for tape ejection will work.

Eject the tape, turn off the camcorder, and leave it with the cassette holder open for at least 1 hour.

The camcorder can be used again if the
and
indications do not appear when the power is turned on again. (
indication appears only when a tape is inserted.)

If moisture condenses on the surface of the tape (CC-2)

If moisture is present on the surface of the tape when the tape is inserted and a tape transport button (▷, ◄◄, etc.) is pressed, the ≜ indication blinks inside the viewfinder. In such case, no function except for tape ejection will work.

Eject the tape and let it sit for at least 1 hour. The tape can be used again if the ≜ indication does not appear when the tape is inserted and a tape transport button is pressed.

If moisture condenses on the lens
No caution indications will appear, but the
picture becomes dim.

Turn off the power and leave the camcorder unused for at least 1 hour.

Notes on Video Head Cleaning

To ensure clear picture, clean the video heads periodically.

When playback pictures are noisy or hardly visible, the video heads may be contaminated. (CC-3)

- [a] Slight contamination
- [b] Critical contamination
- In such cases,
- 1 Clean the video heads with the Sony V8-25CLH cleaning cassette (not supplied), referring to its instrucions.
- 2 After cleaning, check if the picture is clear by recording or playing back with an ordinary tape.
- 3 If the picture is still noisy, repeat cleaning. (Do not repeat cleaning more than 5 times.)

Caution

Do not use a commercially available wet-type cleaning cassette. It may damage the video heads.

Note

If the V8-25CLH cleaning cassette is not available in your area, consult your Sony service facility.

Precautions

On operation

- Operate the camcorder on 6.0 V (battery pack), 7.5 V (AC power adaptor), or 9.0 V (alkaline batteries).
- For DC or AC operation, use the accessories recommended in this manual.
- Should any solid object or liquid fall into the casing, unplug the camcorder and have it checked by qualified personnel before operating it any further.
- Do not hold the camcorder by the viewfinder or the microphone.
- Avoid rough handling or mechanical shock.
 Be particularly careful of the lens.
- Keep the lens cap on the lens when not using the camera.
- Do not wrap the camcorder and operate it because heat may build up internally.
- Keep the camcorder away from strong magnetic fields or mechanical vibration.
- Do not let sand get into the camcorder When you use the camcorder on a sandy beach or dusty place, protect it from the sand or dust. Sand or dust may cause the unit to malfunction and sometimes the malfunction cannot be repaired.
- Do not let the camcorder get wet Keep the camcorder from rain or sea water.
 It may cause malfunction and sometimes the malfunction cannot be repaired.

On care

- When the unit will not be used for a long time, disconnect the power source and remove the tape. Periodically turn on the power, operate the camera section and player section and play back a tape for about 3 minutes.
- Clean the lens with a soft brush to remove dust. If there are fingerprints on it, wipe them off with a soft cloth.
 Clean the camcorder body with a dry, soft cloth, or a soft cloth lightly moistened with a mild detergent solution. Do not use any type of solvent which may damage the finish.

Note on copyright

Televison programmes, films, video tapes, and other materials may be copyrighted. Unauthorized recording of such materials may be contrary to the provision of the copyright laws.

Using Your Camcorder Abroad

Each country has its own electricity system and TV colour system. Before using your camcorder abroad, check the following points.

Power Sources

You can use your camcorder in any country with the supplied AC power adaptor within 110 V to 240 V AC, 50/60Hz.

Difference in Colour Systems

You can view the playback picture in the viewfinder. However, if you want to view the playback picture on a TV, it must be an appropriate PAL system-based TV. There is no compatibility among PAL, PAL-M and PAL-N systems.

PAL system countries

Australia, Austria, Belgium, China, Denmark, Finland, Germany (former West Germany), Great Britain, Holland, Hong Kong, Italy, Kuwait, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, Thailand, etc.

PAL-M system country

Brazil

PAL-N system countries

Argentina, Paraguay, Uruguay

NTSC system countries

Bahama Islands, Bolivia, Canada, Central America, Chile, Colombia, Ecuador, Jamaica, Japan, Korea, Mexico, Peru, Surinam, Taiwan, The Philippines, U.S.A., Venezuela, etc.

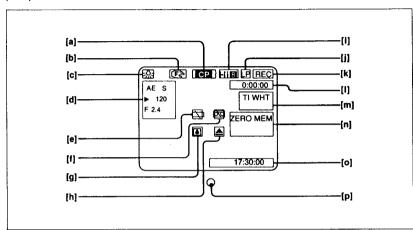

SECAM system countries

Bulgaria, France, Guiana, Hungary, Iran, Iraq, Monaco, Poland, Soviet Union, etc.

27 VIĐEC UNREG GN

THIS NOTE IS COMMON FOR PRINTED WIRING BOARDS AND SCHEMATIC DIAGRAMS.

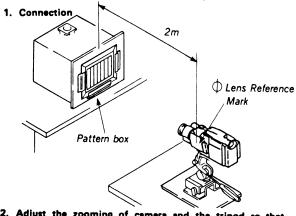

(In addition to this, the necessary note is printed in each block.)

- For printed wiring boards.
- : Through hole.
- : Pattern from the side which enables seeing.
- : Pattern of the rear side. *
- For schematic diagram.
- Caution when replacing chip parts. New parts must be attached after removal of chip. Be careful not to heat the minus side of tantalum capacitor, because it is damaged by the heat.
- All resistors are in ohms, 1/10W or 1/16W unless otherwise noted. $k\Omega$: 1000 Ω , $M\Omega$: 1000 $k\Omega$.
- All capacitors are in μF unless otherwise noted. pF : μμF. 50V or less are not indicated except for electrolytics and tantalums.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- - : nonflammable resistor.
- + : fusible resistor.
- : panel designation.
- △ : internal component.
- : adjustment for repair. *
- : B + Line *
- Circled numbers refer to waveforms.*
- : IN/OUT direction of B (+, -) line. *

When indicating parts by reference number, please include the board name

indicated by the color red.

- For voltage and waveforms. (CAM REC mode)
- Voltage and waveform measuring conditions: *
 - (1) Sample object: Pattern box color bars. *
 - (2) Voltage values: Relative to ground, measured with a DC digital multimeter (impedance 10M-ohm or more), #

2. Adjust the zooming of camera and the tripod so that the output waveform of Fig. a and the picture of Fig. b can be obtain.

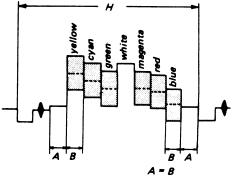

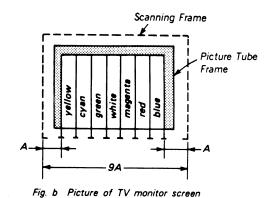

Fig. a Video output waveform

- For voltage and waveforms. (REC / PB mode)
- Voltages are dc between ground and measurement points.*
- Readings are taken with a color-bar signal input. *
- Readings are taken with a digital multimeter (DC10M Ω). *
- Voltage variations may be noted due to normal production tolerances. *

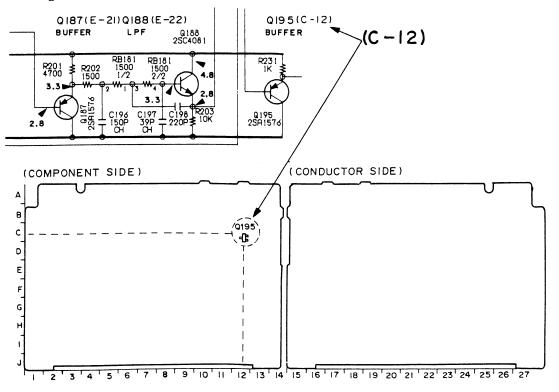

Precautions for replacement of CCD imager block.

- With a pair of IC101 (CCD imager) on the CD-53 complete board and IC001 (corrector ROM) on the DT-77 complete board, it is used a repair part of the CCD imager block.
- Since corrector ROM IC is manufactured to match the CCD imager, replacement of a single unit of the CCD imager corrector ROM cannot be allowed.
- When both a CCD imager and the corrector ROM, replace both the CCD imager and the corrector ROM, when a corrector ROM is not mounted on the service set, install a corrector ROM which is supplied anew.
- IC101 (CCD imager) is not mounted on the CD-53 complete board to be supplied as a repair part, and IC001 (corrector ROM) is not mounted on the DT-77 complete board to be supplied as a repair part. When the respective boards are replaced, remove the respective ICs from the old boards and install them to the new once respectively.
- After the CCD imager block has been replaced, perform the entire adjustments of the camera section.
- CCD imager is structurally in case of being broken down by static electricity.

For this reason, take care to handle it as well as MOS IC. Moreover, care should be taken for dust not to be stuck on the light reseiving section and for strong light not to get into there.

(SEMICONDUCTOR LOCATION)

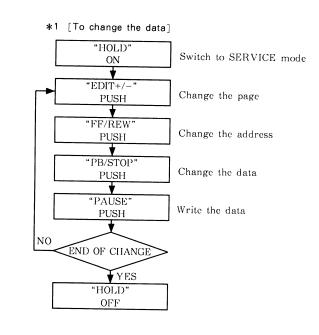

In this service manual, the mounted locations of the semiconductors (IC, transistor, diodes) are indicated as shown below. This enables to find the location on the board easily when servicing.

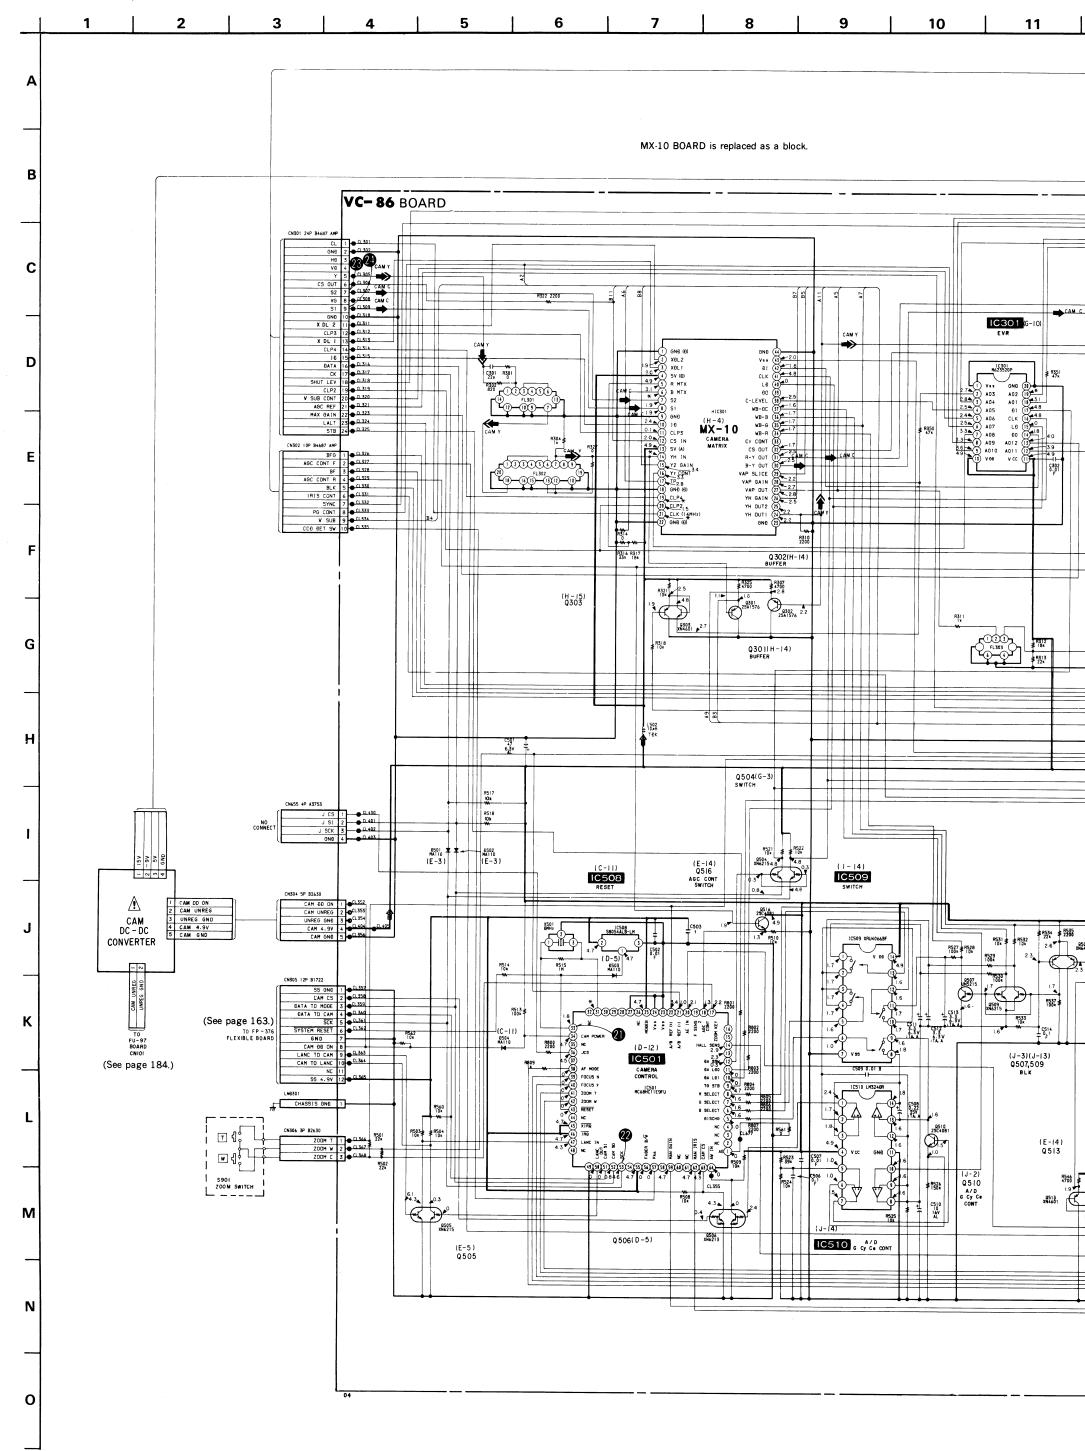

[Semiconductor for Correction List Display] Part code and part name of the semiconductor for correction of the print board is described in the space of each print figure. Use this list when ordering parts.

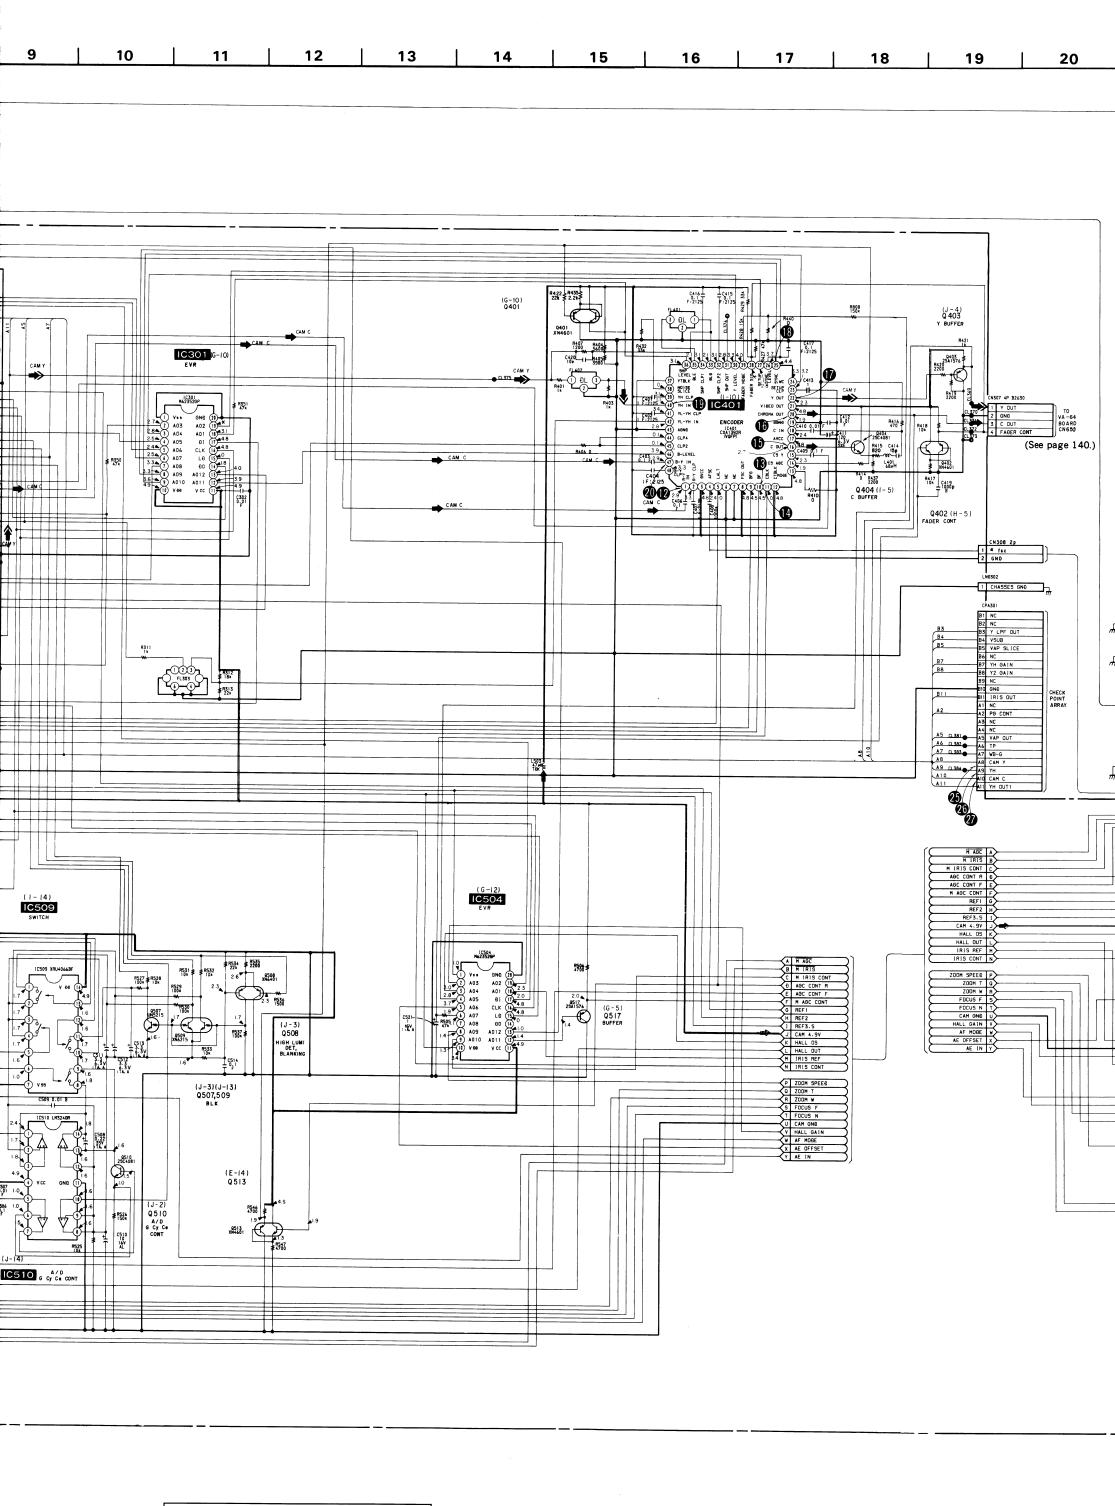

[To set the AEP, UK model to REC mode]

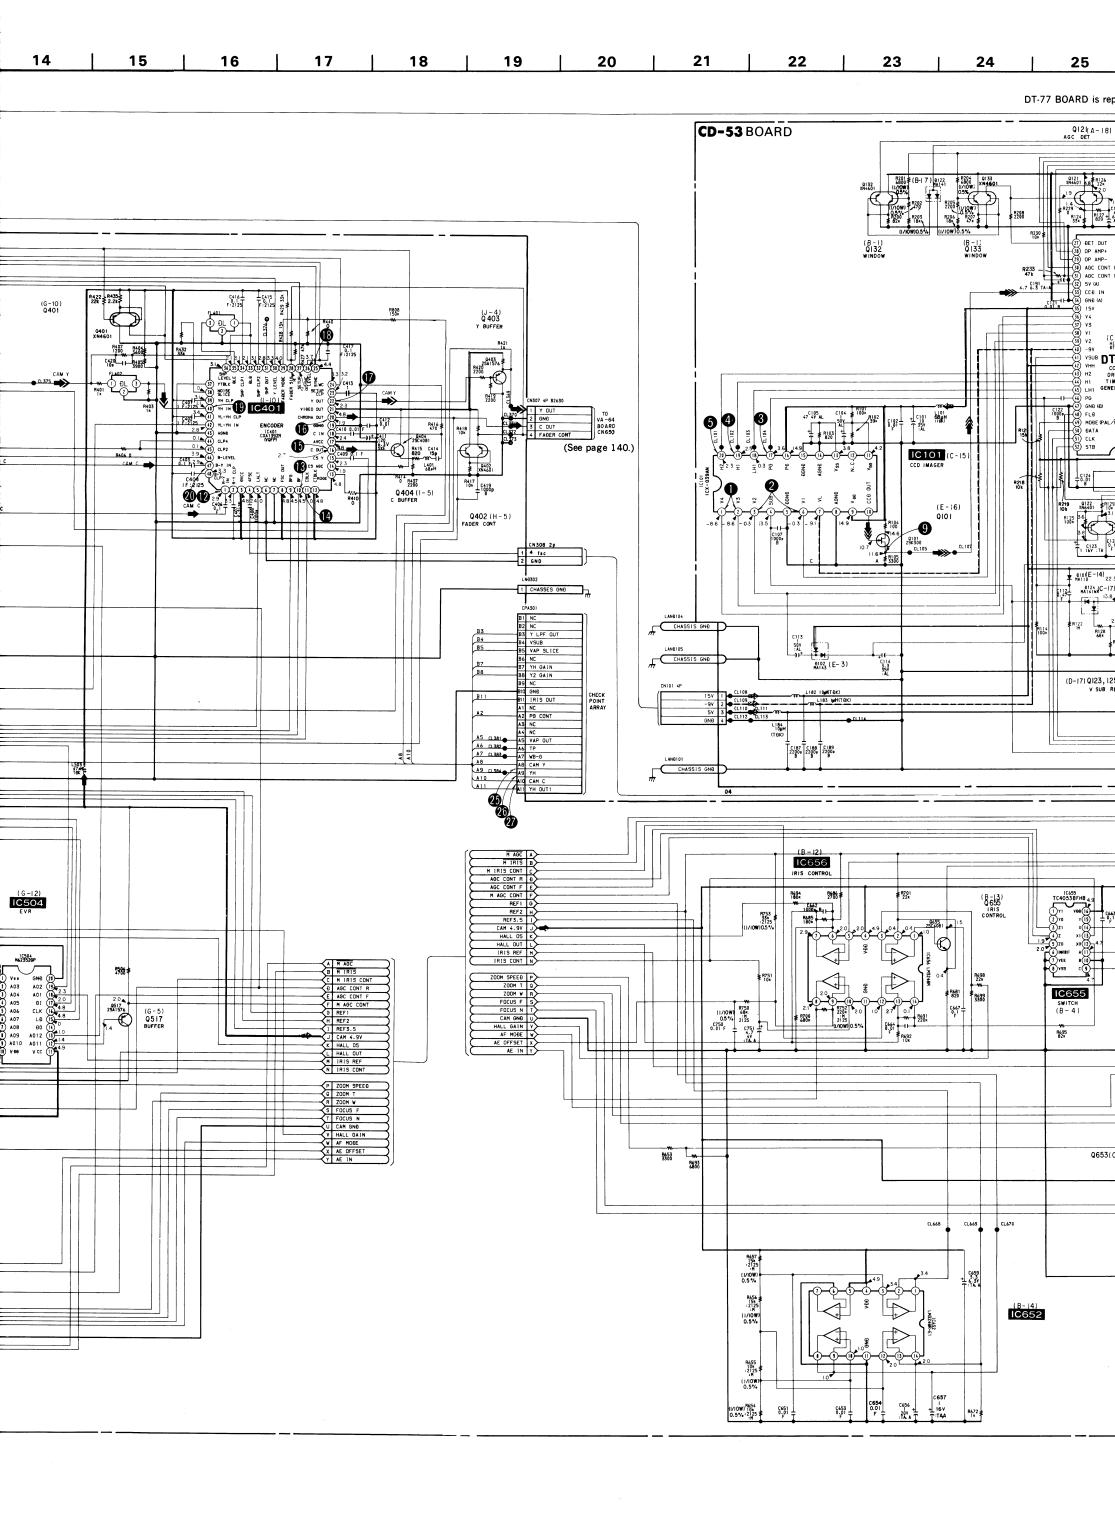

- 1. Enter SERVICE mode with the adjustment remote control.
- 2. Set the data at address: 00 on page: 1 to 01 * 1. Set the data at address: 02 on page: D to 03 *1.
- Turn the power of the set off.
- Turn the power of the set on.
- Make shorting once for S508 land (REC switch) of FK-47 board. After voltage measurement and adjustment, restore as follows:
- 1. Set the data at address: 00 on page: 1 to 01 *1.
- Set the data at address: 02 on page: D to 02 *1.
- 3. Turn the power of the set off.

SECTION 5 EXPLODED VIEWS

NOTE:

- The mechanical parts with no reference number in the exploded views are not supplied.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- -XX, -X mean standardized parts, so they may have some differences from the original one.
- Color Indication of Appearance Parts Example:

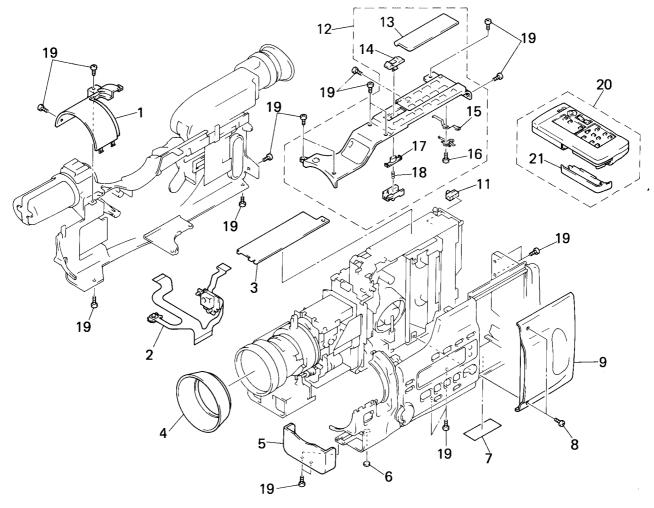

KNOB, BALANCE (WHITE)...(RED)

Parts Color Cabinet's Color

 Hardware(# mark) list is given in the last of this parts list.

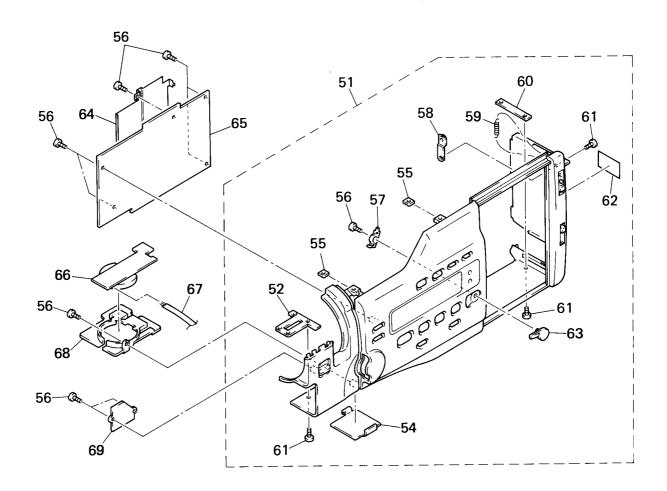

The components identified by mark \bigwedge or dotted line with mark \bigwedge are critical for safety. Replace only with part number specified.

SECTION 6 ELECTRICAL PARTS LIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- -XX, -X mean standardized parts, so they may have some differences from the original one.
- CAPACITORS uF: μF

RESISTORS
 All resistors are in ohms
 METAL: Metal-film resistor
 METAL OXIDE: Metal Oxide-film

resistor F: nonflammable

COILS

uH: µH
SEMICONDUCTORS

In each case, u: μ , for example: uA...: μ A..., uPA...: μ PA..., uPB...: μ PB..., uPC...: μ PC..., uPD...: μ PD....

The components identified by mark \(\frac{\Lambda}{\Lambda} \) or dotted line with mark \(\frac{\Lambda}{\Lambda} \) are critical for safety.

Replace only with part number specified.

When indicating parts by reference number, please include the board name.

1. PREPARATIONS FOR MECHANICAL BLOCK CHECK, ADJUSTMENT AND REPLACEMENT

Note: For removal of the cabinet, the boards, the cassette compartment, etc., refer to the service guides.

1-1. OPERATION WITHOUT CASSETTE COMPARTMENT ASSEMBLY AND TAPE

Note: The unit will not work if exposed to a strong light.

1-1-1. How to Trigger the Loading Operation (See Fig. 1-1.)

- Supply power to the unit after removing the cabinet, the camera block, the cassette compartment assembly, etc., as indicated in the service guides. (This will enable operation of the mechanical deck.)
- Cover the LED assembly with an opaque cap, etc. 1.
- Attach a piece of tape to the RECOG switch so that the pin is held down.
- 4) Push the EJECT lever 3 in the direction of the arrow 4.

1-1-2. Setting the Playback Mode (See Fig. 1-1.)

- 1) Follow the procedures in section 1-1-1. above.
- 2) Put the rubber band @ around the S and T reels.
- 3) Press the PLAY switch of unit, then push the tension regulator arm assembly so in the direction of the arrow when the T reel starts to rotate (the tension regulator band will be released, and the S reel will start rotating).
- 4) To stop operation, press the STOP switch.

1-1-3. Eject Operation (See Fig. 1-1.)

1) To eject, turn the EJECT switch on.

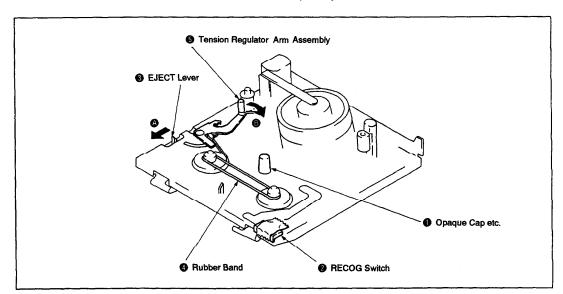

Fig. 1-1.

1-2. THE MODE SELECTOR

1-2-1. Name of Each Part (external) (See Fig. 1-2.)

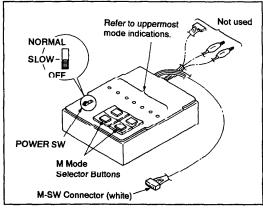

Fig. 1-2.

1-2-2. Connections (See Fig. 1-3.)

- Mount the MODE SELECTOR III panel (Ref. No. J-9)
 onto the mode selector.
- Attach the conversion connector (Ref. No. J-8) of MODE SELECTOR III to the 6-pin connector (white) of the mode selector M-SW.
- Remove the FP-89 flexible board f from the flexible connector f.
- 4) Attach the FP-89 flexible board (5) to the flexible connector (6) of the MODE SELECTOR III conversion connector (8), then attach the 2-pin connector (white) (6) of the loading motor to the 2-pin connector (white) (7).

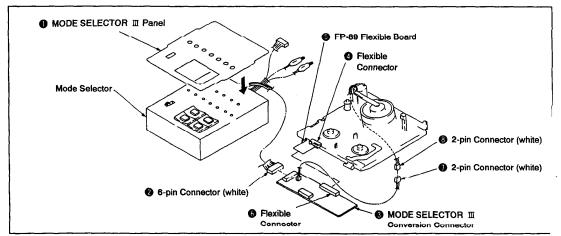

Fig. 1-3.

1-2-3. Handling (See Figs. 1-2. and 1-4.)

- Use only the M mode selector buttons.
- Refer to mode indications on the uppermost part of the MODE SELECTOR III panel.
- If the right M mode selector button is kept pressed, the lit
 indication will change in the order of EJECT → (IA) → ULD
 → (IB) → STOP → (IC) → FWD.
- To change modes in the reverse direction (from FWD to EJECT), press the left selector button.

Note: For this U mechanism, the uppermost indicators on the MODE SELECTOR III panel are used. The IA, IB and IC indications light up during mode changes.

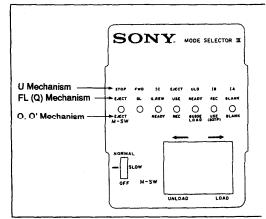

Fig. 1-4.

2. PERIODICAL CHECK AND MAINTENANCE (See Fig. 2-1.)

The following periodical check and maintenance procedures are necessary to ensure proper operation and to protect the tapes as well as the unit, and the following maintenance procedures must be always carried out after repairing regardless of how long the unit has been used.

2-1. ROTARY DRUM ASSEMBLY CLEANING

 While pressing a piece of chamois leather (Ref. No. J-2) moistened in cleaning fluid (Ref. No. J-1) lightly against the rotary drum, turn the rotary upper drum slowly counterclockwise with your fingers.

Note: Do not drive the drum with the motor, and do not turn it clockwise.

Do not move the chamois leather vertically against the head tip; this can damage the head tip. Strictly follow the cleaning instructions above.

2-2. TAPE PATH CLEANING

 Set the cassette compartment assembly to the eject state, or remove it. Then clean the tape path (guides No. 1 to 7, capstan shaft, pinch rollers) with a piece of chamois leather moistened in cleaning fluid (See Fig. 2-1).

2-3. DRIVE SYSTEM CLEANING

 Clean the drive system (timing belt, reel table surface) with a piece of cloth moistened in cleaning fluid.

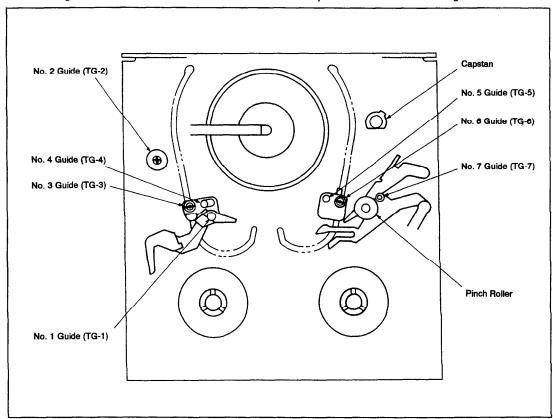

Fig. 2-1.

2-4. PERIODICAL CHECK ITEMS

○Cleaning

©Lubrication

Notes: When overhauling the unit, perform parts replacement referring to the table above.

Regarding Oil:

- Always use the specified oil (using oil of different viscosity, etc. can cause troubles of several kinds).
 Specified oil: Part No. 7-661-018-01 (Mitsubishi Diamond Oil Hydrofluid EP56)
- Be sure that no dirt is mixed in the oil to be used on axle bearings. Use of dirty oil can result in bearing wear and burning.
- By "one drop of oil" is meant the quantity of oil adhering to the end of a 2mm-diameter rod as shown in Fig. 2-2.

On grease:

• Use the specified grease. Grease: Part No. 7-662-010-08 (Sony grease SGL-701)

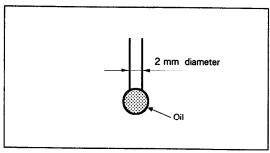

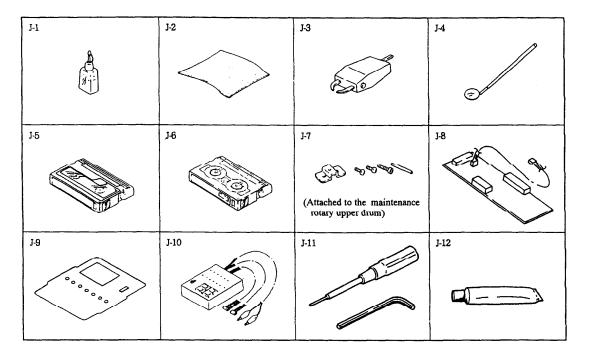

Fig. 2-2.

3. MECHANICAL BLOCK CHECK, ADJUSTMENT AND REPLACEMENT

Notes: • Use the mode selector (Ref. No. J-10) for procedures in this chapter.

 Modes within a frame _____ are those set by pressing the buttons of the mode selector.

3-1. HC ROLLER ASSEMBLY

1. Removal (See Fig. 3-1.)

Remove the screw 1 , then remove the HC roller assembly
 .

2. Installation (See Fig. 3-1.)

1) Align the two dowels 3 attached to the HC roller assembly with the two holes 4 in the mechanism chassis.

2) Secure the HC roller assembly 2 with the screw 1.

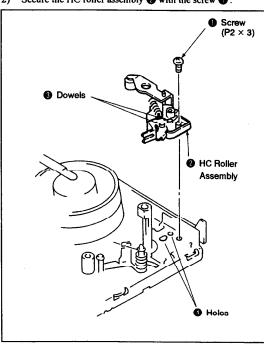

Fig. 3-1.

3-2. GUIDE GUARD ASSEMBLY

1. Removal (See Fig. 3-2.)

Remove the screw 1, then remove the guide guard assembly 2.

2. Installation (See Fig. 3-2.)

- Align the dowel 3 attached to the guide guard assembly with the hole 3.
- 2) Secure the guide guard assembly @ with the screw 1.

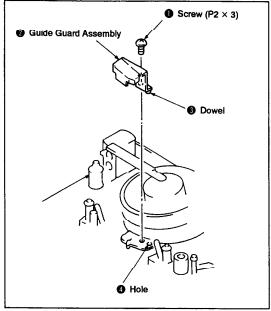

Fig. 3-2.

3-3. DC MOTOR (CAPSTAN MOTOR) ASSEMBLY

- 1. Removal (See Fig. 3-3.)
- 1) Set the ULD mode.
- 2) Turn the stopper 1 in the direction of the arrow (4) as far as it will go.
- 3) Remove the two screws ②, then remove the DC motor ③.
- 2. Installation (See Fig. 3-3.)
- Align the two screwed dowels with the two holes then engage the toothed part with the connecting gear .
- 2) Secure the DC motor assembly (3) with the two screws (2).
- Turn the stopper in the direction of the arrow as far as it will go.

Note: • When engaging the gears, take care not to damage their teeth.

- Do not leave any clearance between the DC motor **3** and the chassis.
- Do not touch the capstan motor axle*, the oil seal* and the rotor*.

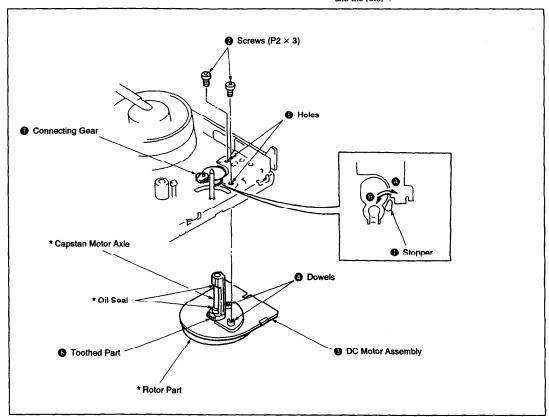

Fig. 3-3.

3-4. S BRAKE, T BRAKE

- 1. Removal (See Fig. 3-4.)
- 1) Remove the torsion coil spring (ST) 1.
- Remove the axle holding pin ②, then remove the T brake
 .
- 3) Remove the axle holding pin (4), then remove the S brake (5).
- 2. installation (See Fig. 3-4.)
- 1) While fitting the toothed part (6) into the notch (7), mount the S brake (5).
- 2) Insert the axle holding pin 4.
- 3) Insert the axle 3 to the S reel side of the brake release arm 3 so that the 2 part comes closer to the drum than part 3, and mount the T brake 3.
- 4) Insert the axle holding pin ②.
- 5) Insert the torsion coil spring (ST) ① below the claw ① of the axle ② , then hook it to two claws ② .

Note: Confirm that the claws of axle holding pins ② and ③ are not broken before assembling.

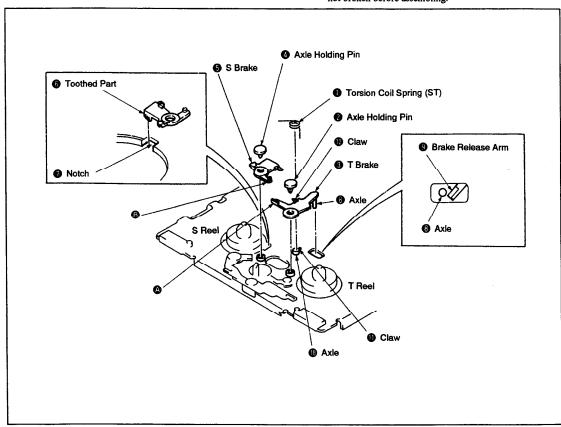

Fig. 3-4.

3-5. LB BRAKE, AXLE HOLDING PINS

- 1. Removal (See Fig. 3-5.)
- 1) Remove the screw 1, then remove the TL holding plate 2.
- 2) Remove the axle holding pin (3), then remove the LB brake (3).
- 3) Remove the axle holding pin 3, then remove the LB lever 6.
- 2. Installation (See Fig. 3-5.)
- 1) Mount the LB lever (6) matching it to pin (6) of the LB gear, then secure it with the axle holding pin (6).
- 2) Insert the pin (3) into the notch (3) of the LB lever (5), then mount the LB brake (1) while inserting the toothed part (10) into the notch (1).
- 3) Insert the axle holding pin 3.
- 4) Align the dowel (1) with the hole (1), then mount the TL holding plate and secure it with the screw (1).

Note: Confirm that the claws of axle holding pins (a) and (b) are not broken before assembling.

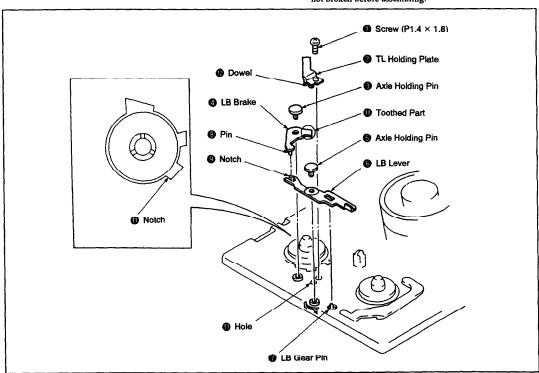

Fig. 3-5.

3-6. LB RELEASE ARM

1. Removal (See Fig. 3-6.)

- While pushing the claw in the direction of the arrow, remove the LB release arm .
- 2. Installation (See Fig. 3-6.)
- 1) Fit the LB release arm 2 to the axle 3, insert protrusions 3, 5, 6, 10 into the three holes 4, then secure with the claw 1.

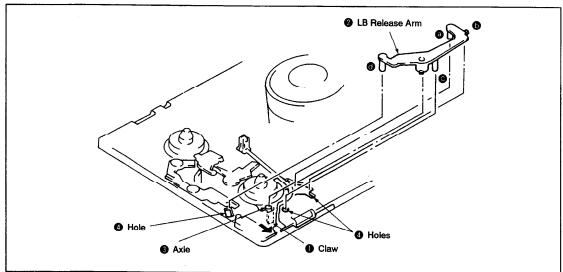

Fig. 3-6.

3-7. RK STOPPER, RK STOPPER ARMS

1. Removal (See Fig, 3-7.)

- 1) Remove the torsion coil spring (RK) 1.
- Open the chassis claw ②, then remove the RK stopper arm ③.
- 3) Remove the RK stopper 4.

2. Installation (See Fig. 3-7.)

- 1) Mount the RK stopper 4 onto the axle 6.
- 2) Mount the RK stopper arm 3 onto the axle 3, insert Pin 10 into hole 3, then hook the claw 3 of the chassis to the hole 3.
- 3) Insert the torsion coil spring (RK) 1 into the axle 3, then hook it to claws 3 and 5.

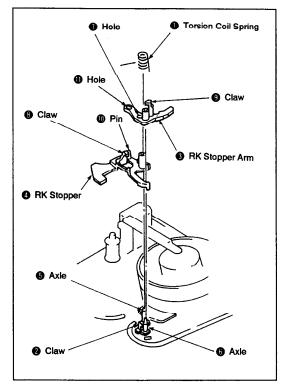

Fig. 3-7.

3-8. PINCH ARM ASSEMBLY, TG-7 ASSEMBLY

- 1. Removal (See Fig. 3-8.)
- 1) Set the IB mode.
- Remove the stopper washer 1 , then remove the pinch arm assembly 2 .
- 3) Bend the claw **(1)** inside hole **(3)** in the direction of the arrow using a thin screwdriver or the like, then remove the TG-7 plate spring **(3)**.
- 4) Remove the TG-7 arm assembly 6.

- 2. Installation (See Fig. 3-8.)
- 1) Grease the inner surfaces of hole 1 (See Fig. A).
- 2) Insert the axle (3) of the TG-7 arm assembly (6) into the hole (1).
- 3) Grease the shaded section (See Fig. A).
- 4) Insert the TG-7 plate spring § into the hole §, then secure it with the claw §.
- 5) Apply half a drop of oil to the axle (See Fig. B).
- 6) Fit the pinch arm assembly ② to the axle ③ and insert the pinch roller sub arm assembly tab ⑩ into the ⑥ part.
- 7) Install the stopper washer 1.

Note: • Take care not to grease the screw ① of the TG-7 arm assembly ③ (See Fig. A).

- When fitting the pinch arm assembly ② to the axle
 ③, make sure that it does not touch the TG-7 guide
 ⑦ or the rubber roller ③.
- After assembling, be sure to perform tape path adjustment as described in section 4.

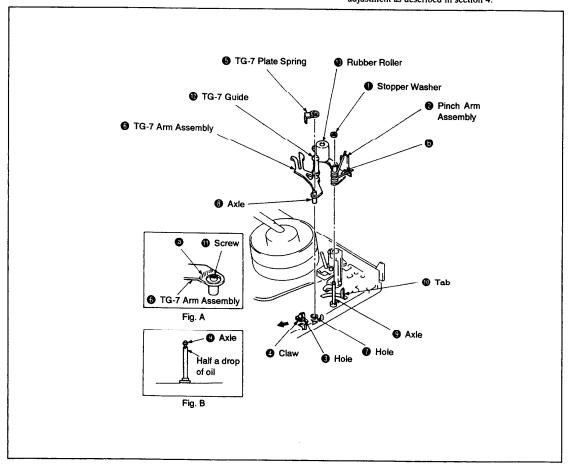

Fig. 3-8.

3-9. TG-2 ASSEMBLY

1. Removal (See Fig. 3-9.)

- 1) Remove the TG-2 upper flange assembly ①.
- 2) Remove the TG-2 roller 2, the TG-2 sleeve 3, the TG-2 lower flange 3 and the compression spring 3.

2. Installation (See Fig. 3-9.)

- 1) Mount the compression spring § , the TG-2 lower flange § , the TG-2 sleeve § and the TG-2 roller ② to the axle.
- Secure the TG-2 upper flange to the axle by rotating it 4 to 6 turns.

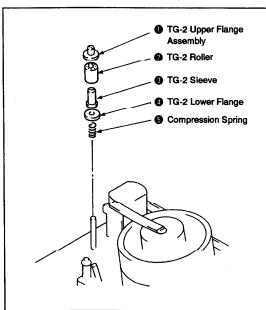

Fig. 3-9.

3. TG-2 Height Preset (see Fig. 3-10.)

 Adjust height from the mechanism chassis upper surface to the TG-2 upper flange upper surface to 18.6 mm by turning the TG-2 upper flange .

Note: After adjustment, be sure to perform tape path adjustment as described in section 4.

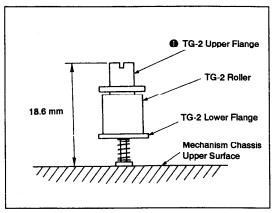

Fig. 3-10.

3-10. S REEL TABLE ASSEMBLY, T REEL TABLE ASSEMBLY

1. Removal (See Fig. 3-11.)

- 1) Remove the S hrake and T hrake as described in section 3-4
- 2) Remove the TL holding plate as described in section 3-5.
- Remove the tension regulator band assembly as described in section 3-11.
- 4) Remove the S reel table assembly 1 .
- 5) Turn the stopper 2 approx. 90° in the direction of the arrow 3.
- 6) While sliding the LB release arm (s) in the direction of the arrow (s), remove the T reel table assembly (s).

2. installation (See Fig. 3-11.)

- 1) Apply half a drop of oil to the axle (See Fig. A).
- 2) Move the RK gear (9) in the direction of the arrow (9) and the TS brake (1) in the direction of the arrow (1), putting them out of the way.

- 3) While sliding the LB release arm 3 in the direction of the arrow 3, mount the T reel table assembly 4 onto the axle 5, then turn the stopper 7 in the direction of the arrow 3 as far as it will go.
- 4) Apply half a drop of oil to the axle (See Fig. B).
- 5) Move the RK gear (3) in the direction of the arrow (3), the UL brake (3) in the direction of the arrow (3) and the LB brake (3) in the direction of the arrow (3), putting them out of the way.
- 6) Mount the S reel table 1 onto the axle 1.
- Mount the tension regulator band assembly as described in section 3-11.
- 3) Mount the TL holding plate as described in section 3-5.
- Mount the S brake and T brake assemblies as described in section 3-4.

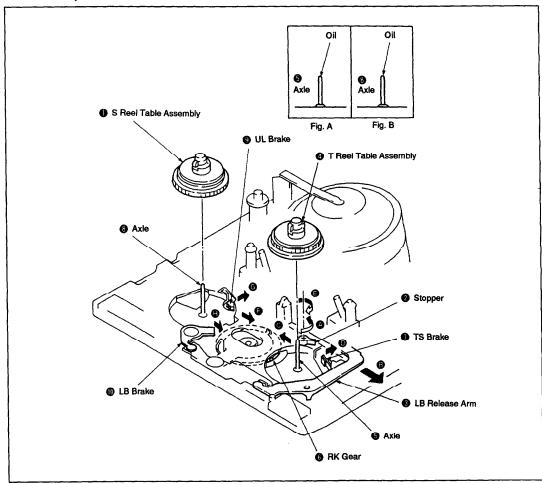

Fig. 3-11.

3-11. TENSION REGULATOR BAND ASSEMBLY, TENSION REGULATOR ARM ASSEMBLY

- 1. Removal (See Fig. 3-12.)
- 1) Remove the TL holding plate as described in section 3-5.
- 2) Remove the screw 1.
- 3) Using a thin screwdriver or the like, remove the tension regulator band assembly 4 from the axle 3 of tension regulator arm assembly 2.
- 4) Remove the tension spring 6.
- 5) Remove the stopper washer 6 from the back of the mechanism chassis, then remove the tension regulator arm assembly 2.
- Open the claw 1, then remove the adjust arm 2.

Note: When removing the tension regulator band assembly ②, take care not to twist or bend it, and not to touch the felt surface ③.

2. Installation (See Fig. 3-12.)

- Engage the adjust arm in the position shown in Fig. A, then close the claw in.
- 2) Apply half a drop of oil to the hole 10
- 3) Mount the tension regulator arm assembly ②, then insert it into the slot ③ so that the ④ part comes to the arrow ② side of the switch lever assembly (See Fig. B).

- 4) While holding the tension regulator arm assembly 2 from the mechanism chassis front, secure it with the stopper washer 6 from the back.
- 65) Hook the R hook of the tension spring 65 to the adjust arm 65 as shown in the figure, then hook the opposite end to the tension regulator arm assembly 62.
- 6) Mount the tension regulator band assembly ② onto the axle ③ of tension regulator arm assembly ②, and place it so that the felt surface ④ comes against the shaded portion of the S reel table assembly ②.
- 7) Mount the tension regulator plate (1) of the tension regulator band assembly (4) so that it is aligned with the dowel (12) of the mechanism chassis, then secure it temporarily with the screw (1).
- 8) Mount the TL holding plate as described in section 3-5.
- Adjust tension regulator FWD position as described in section 3-12.
- 10) Perform adjust arm adjustment as described in section 3-22.

Note: When mounting the tension regulator band assembly 2, take care not to twist or bend it, and not to touch the felt surface 2.

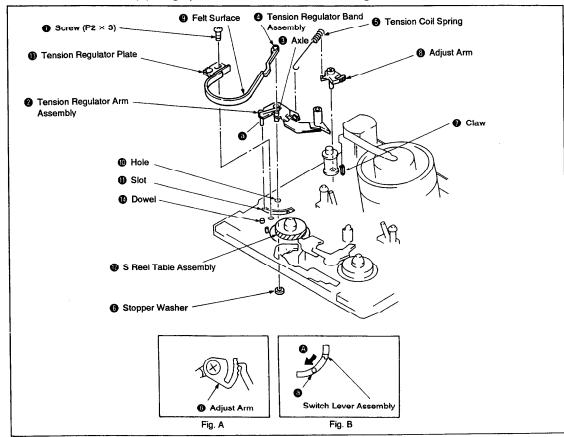

Fig. 3-12.

3-12. TENSION REGULATOR FWD POSITION PRESET (See Fig. 3-13.)

- 1) Load a cassette tape and set the FWD mode.
- 2) Confirm whether the distance between part of the tension regulator arm and the groove of the chassis is 1.1 ± 0.3 mm. If this distance is not within the specified range, remove the cassette tape and perform the following adjustment.
- Loosen the fixing screw of the tension regulator band assembly .
- 4) Slide the tension regulator plate in the direction of the arrow if the measured distance is over the specified range, and in the direction of the arrow if it is under that range. Then, fix it with the screw 1.
- 5) Repeat steps 1) and 2) and confirm that the distance is within the specified range

Note: Use a cassette with the tape advanced halfway.

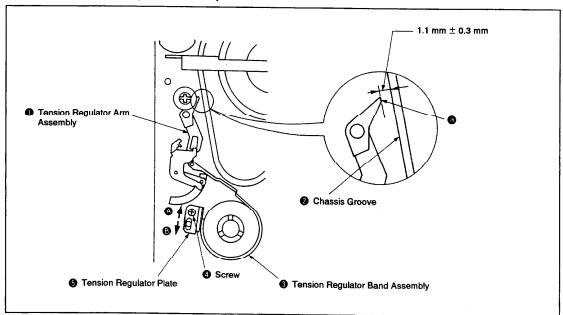

Fig. 3-13.

3-13. DRUM ASSEMBLY, DEW SENSOR

- 1. Removal (See Fig. 3-14.)
- 1) Set the EJECT mode.
- 2) Remove the flexible board 1 and the two connectors 2.
- Remove the guide guard assembly as described in section 3-2.
- 4) Remove the screw 3 , then remove the axle ground terminal 4.
- 5) Remove the three screws 3, then remove the drum assembly 3 from the mechanism chassis.
- 6) Remove the connector (1)
- 7) Remove the screw 10, then remove the dew sensor 18

Note: • When removing the drum assembly **3** from the mechanism chassis, take care not to cut the flexible board **3** or the harness.

• Take care not to touch the head tip (9).

- 2. Installation (See Fig. 3-14.)
- 1) Insert part (a) of the dew sensor (b) into the notch (1) of the mechanism chassis, then secure it with the screw (7).
- 2) Mount the connector 10.
- Clamp the harness (3) of the dew sensor (3) with the reinforcing the claw (4) of the plate SS assembly (See Fig. A).
- 4) Insert the connector ② and the flexible board ① into the hole ② of the mechanism chassis, align the drum assembly ③ with the two dowels ③ and secure it with the three screws ⑤.
- 5) Align the axle ground terminal ② with the two dowels ③ of the mechanism chassis and secure it with the screw ③.
- 6) Mount the guide guard assembly as described in section 3-2.
- 7) Mount the two connectors 2 and the flexible board 1.

Note: • Take care not to cut the flexible board ① or the harness ③.

- Take care not to touch the head tip (9).
- After assembling, be sure to perform Tape Path Adjustment following instructions in section 4.

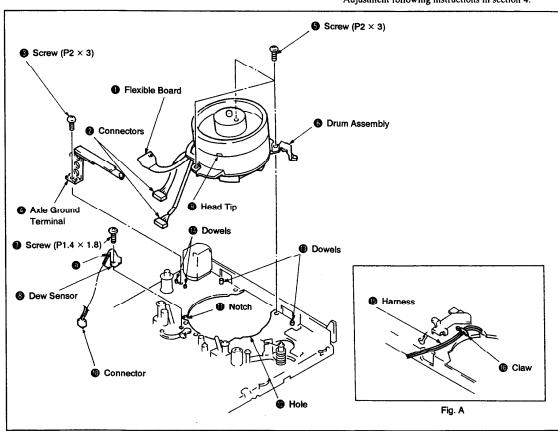

Fig. 3-14.

3-14. EJECT LEVER, SWITCH LEVER ASSEMBLY, PINCH ROLLER SUB ARM ASSEMBLY

- 1. Removal (See Fig. 3-15.)
- Remove the DC motor (capstan motor) as described in section 3-3.
- 2) Set the STOP mode.
- 3) Remove the claw 1, then remove the eject lever 2.
- 4) Remove the stopper washer 3, then remove the switch lever assembly 4.
- 5) Remove the pinch roller load spring 6.
- Remove the stopper washer 3, then remove the pinch roller sub arm assembly 3.
- 2. Installation (See Fig. 3-15.)
- 1) Grease the axle (See Fig. A).
- Assemble by inserting part of the pinch roller sub arm assembly into the slot , then insert the pin into the loading lever assembly notch .
- 3) Secure with the stopper washer 6.

- 4) Mount the pinch roller load spring 3 by catching its 6 end between the claw 6 and the chassis side and its 6 end to the claw 6.
- 5) Apply half a drop of oil to the axle (See Fig. B).
- Align the groove **3** of the switch lever assembly **4** with the mode detector switch protrusion **3**, mount it on the axle **3**, then insert the pin **3** into the drive gear (left) assembly **4** outer groove.
- 7) Secure with the stopper washer 3.
- 8) Mount the eject lever 2 and close the claw 1.
- 9) Mount the DC motor (capstan motor) as described in section 3-3

Note: When mounting the switch lever assembly ① onto the axle ② with the tension regulator arm assembly installed, set the pin ② to the arrow ② side of the switch lever assembly ③.

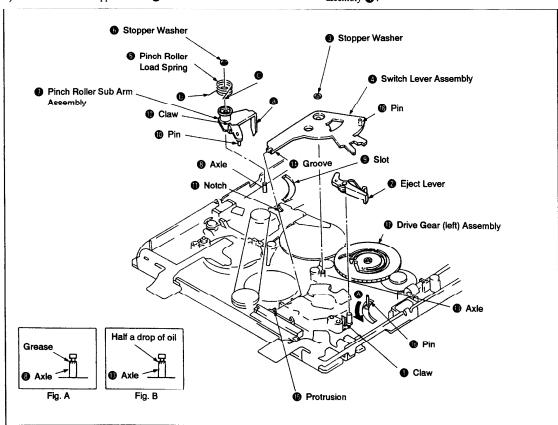

Fig. 3-15.

3-15. TIMING BELT (L), RC GEAR ASSEMBLY, LOADING LEVER ASSEMBLY, TIMING BELT (S), CONNECTING GEAR ASSEMBLY

1. Removal (See Fig. 3-16.)

- Remove the DC motor (capstan motor) as described in section 3-3.
- Remove the pinch roller sub arm assembly as described in section 3-14.
- Set the STOP mode.
- 4) Remove the stopper washer ①, then remove the RC gear assembly ② from the axle ② with the timing belt (L) ③ attached.
- 5) Remove the timing belt (L) § from the idler pulley assembly §.
- 6) Remove the stopper washer (1) and remove the loading lever assembly (1) while pushing the claw (1) in the direction of the arrow (2).
- Turn the stopper (1) approx. 90° in the direction of the arrow (3).
- Remove the connecting gear assembly from the axle with the timing belt (S) attached.
- Remove the timing belt (S) from the idler pulley assembly .

Note: When removing the connecting gear 10, take care not touch the flange section 10.

- 2. Installation (See Fig. 3-16.)
- 1) Apply half a drop of oil to the axle (See Fig. F).
- 2) Hook one end of the timing belt (S) onto the connecting gear assembly and the other end onto gear of the idler pulley assembly . (Refer to the figure.)
- 3) Mount the connecting gear assembly (1) with the timing belt (S) (1) attached to the axle (1).
- 4) Turn the stopper (9) in the direction of the arrow (6) as far as it will go.
- Apply half a drop of oil to the axle (See Fig. A).
- 6) Fit the loading lever assembly
 to the axle
 , secure the
 part with the claw
 and place the pin
 into the groove of the drive gear (right) assembly
 .
- 7) Install the stopper washer 13.
- 8) Place the timing belt (L) (a) around the gears of the RC gear assembly (a) indicated in Fig. B, and its opposite side around the gear (b) of the idler pulley assembly (c). (See Fig. E.)
- 9) Mount the RC gear assembly ② onto the axle ④ with the timing belt (L) ③ attached, and engage it with the gear of the RK gear assembly ⑤.
- 10) Install the stopper washer 1
- Grease parts of the loading lever assembly indicated in Fig. C.
- 12) Mount the pinch roller sub arm assembly as described in section 3-14.
- Mount the DC motor (capstan motor) as described in section 3-3.

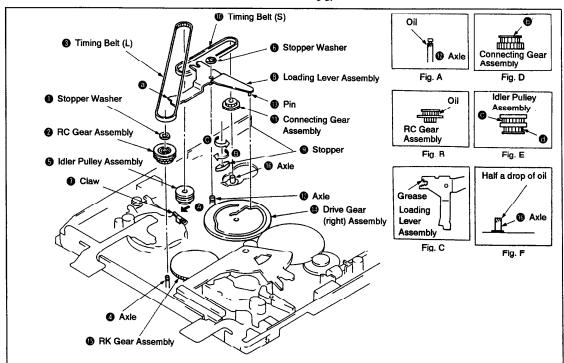

Fig. 3-16.

3-16. IDLER PULLEY, TS BRAKE ASSEMBLY, LB GEAR ASSEMBLY, RK GEAR ASSEMBLY

1. Removal (See Fig. 3-17.)

- Remove the DC motor (capstan motor) as described in section 3-3.
- Remove the switch lever assembly as described in section 3-14.
- Remove the timing belt (L), the RC gear assembly, the loading lever assembly, the timing belt (S) and the connecting gear assembly described in section 3-15.
- Set the STOP mode.
- 5) Remove the stopper washer ①, then remove the idler pulley ②.
- 6) Open the claw 3 , then remove the TS brake assembly 4 .
- 7) Remove the torsion coil spring (LB) 6.
- Remove the stopper washer (3), then remove the LB gear assembly (1).
- 9) Remove the RK gear assembly 8.

Note: When removing the idler pulley ②, take care not to touch the flange section ③. (See Fig. C.)

- 2. Installation (See Fig. 3-17.)
- 1) Apply half a drop of oil to the axle (See Fig. A).
- Mount the RK gear assembly 3 onto the axle 3, keeping it in horizontal position.
- 3) Apply half a drop of oil to the axle ((See Fig. B).
- 4) Mount the LB gear assembly ① onto the axle ① and secure it with the stopper washer ⑥.
- 5) Insert the torsion coil spring (LB) (a) into the axle (b), then hook it to the mechanism chassis notch (b) and to the tab (c).
- Mount the TS brake assembly 4 and close the claw 3.
- 7) Apply half a drop of oil to the axle (See Fig. D).
- 8) Mount the idler pulley 20 onto the axle 10, then secure it with the stopper washer 10.
- Mount the timing belt (L), the RC gear assembly, the loading lever assembly, the timing belt (S) and the connecting gear assembly as described in section 3-15.
- 10) Mount the switch lever assembly as described in section 3-14.
- 11) Mount the DC motor (capstan motor) as described in section 3-3.

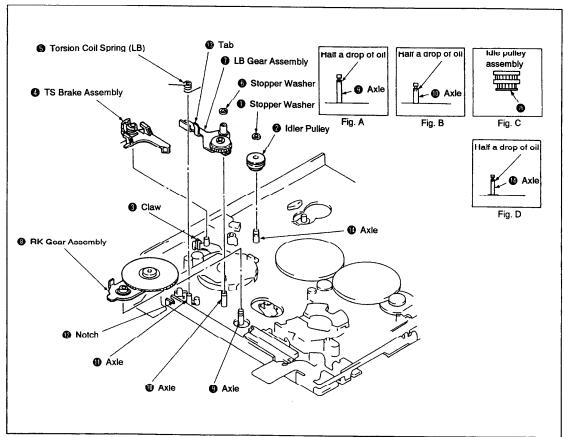

Fig. 3-17.

3-17. UL GEAR, UL BRAKE, UL ARM, LB PLATE SPRING

- 1. Removal (See Fig. 3-18.)
- 1) Remove the switch lever assembly as described in section 3-14.
- Remove the stopper washer
 , then remove the UL gear
 .
- 3) Remove the UL arm (3), the 1.6 mm-diameter poly washer (4) and the LB plate spring (5).
- 4) Remove the UL brake 6.

- 2. Installation (See Fig. 3-18.)
- 1) Mount the UL brake 6.
- 2) Apply half a drop of oil to the axle (See Fig. A).
- 3) Mount the LB plate spring § to the axle ¶ as shown in Fig. B, then install the 1.6mm-diameter poly washer ¶.
- 4) Mount the UL arm 3 to the axle 3 so that the protrusion 3 comes into the groove 3 of the UL brake 3.
- 5) Mount the UL gear ② to the axle ③ and engage it with the gear of the drive gear (left) assembly ⑥.
- 6) Install the stopper washer 1.
- 7) Mount the switch lever assembly as described in section 3-14.

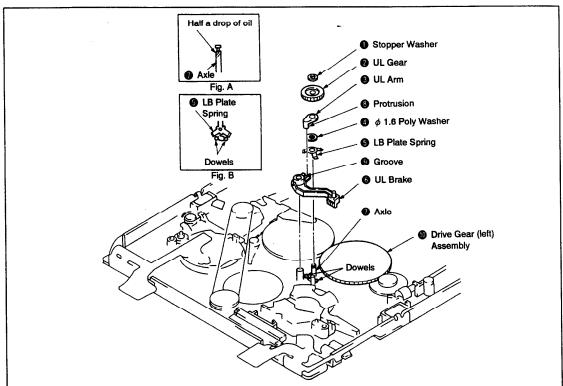

Fig. 3-18.

3-18. COASTER (RIGHT) ASSEMBLY, DRIVE GEAR (RIGHT) ASSEMBLY

1. Removal (See Fig. 3-19.)

- Remove the DC motor (capetan motor) as described in section 3-3.
- 2) Remove the drum unit as described in section 3-13.
- 3) Remove the switch lever assembly as described in section 3-14.
- 4) Remove the timing belt (L), the RC gear assembly and the loading lever assembly as described in section 3-15.
- 5) Set the STOP mode.
- 7) Remove the two screws **(4)**, then remove the reinforcing plate TT **(5)**.
- 8) Remove the stopper washer 1.5 (1), then remove the drive gear (right) assembly (1).

2. Installation (See Fig. 3-19.)

- 1) Grease the points of the mechanism chassis shown in Fig A.
- 2) Apply half a drop of oil to the axle (See Fig. F).
- Grease pin (a), axle (b) and dowel (b) of the coaster (right) assembly (a) (See Fig. D).
- 4) Mount by aligning the pin (a) and the axle (b) with the slot (b) of the mechanism chassis.
- 5) Move the brake release am (1) in the direction of the arrow (a) to put it out of the way.

- 6) Mount the drive gear (right) assembly 10 to the axle 13, and engage it with the drive gear (left) assembly 10 as shown in Fig. B.
- 7) Align the 13 part with the 13 part, and the hole 13 with the pin 13 of the coaster (right) assembly 13.
 -) Install the stopper washer 1.5 1 ...
- 9) Mount by aligning the coaster plate spring with the axle of the coaster (right) assembly and pin , then secure with the screw .
- 10) Mount the reinforcing plate TT aligning it with the dowel
 then tighten the two screws in the indicated order.
- 11) Grease the points indicated in Figs. C and E.
- 12) Mount the timing belt (L), the RC gear assembly and the loading lever assembly as described in section 3-15.
- 13) Mount the switch lever assembly as described in section 3-14.
- 14) Mount the drum unit as described in section 3-13.
- 15) Mount the DC motor (capstan motor) as described in section 3-3.

Note: • Screw a should be tightened with a tightening torque of approx. 500g·cm. If tightened too much, the coaster (right) assembly and the coaster plate spring will be deformed.

 After installing, be sure to perform tape path adjustment as described in section 4.

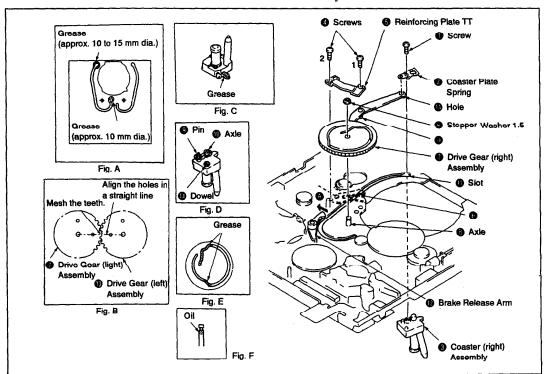

Fig. 3-19.

3-19. COASTER (LEFT) ASSEMBLY, DRIVE GEAR (LEFT) ASSEMBLY

1. Removal (See Fig. 3-20.)

- Remove the DC motor (capstan motor) as described in section 3-3.
- 2) Remove the drum assembly as described in section 3-13.
- Remove the switch lever assembly and the pinch roller sub-arm assembly as described in section 3-14.
- Remove the timing belt (L), the RC gear assembly and the loading lever assembly as described in section 3-15.
- Remove the coaster (right) assembly and the drive gear (right)assembly as described in section 3-18.
- Remove the screw (1), then remove the coaster plate spring
 and the coaster (left) assembly (3).
- 7) Remove the two screws (1), then remove the reinforcing plate SS assembly (5).
- Remove the stopper washer 1.5 (3), then remove the drive gear (left) assembly (1).

2. Installation (See Fig. 3-20.)

- 1) Grease the points of the mechanism chassis shown in Fig A.
- 2) Apply half a drop of oil to the axle (See Fig. E).
- 3) Grease pin (s), axle (t) and dowel (b) of the coaster (left) assembly (s) (See Fig. B).
- Mount by aligning the pin and the axle with the slot for the mechanism chassis.
- 5) Fit the drive gear (left) assembly 10 to the axle 130, and mount so that the gear engages with the wheel gear 130 and the UL gear 130.

- 6) Align the **(1)** part with the slot **(1)**, and the hole **(1)** with the pin **(2)** of the coaster (left) assembly **(3)**.
 -) Install the stopper washer 1.5 6.
- 8) Mount by aligning the coaster plate spring 2 with the axle 10 and pin 3 of the coaster (left) assembly 3, then secure with the screw 10.
- 9) Mount the reinforcing plate SS assembly 6 aligning it with the dowel 6, then tighten the two screws 6 in the indicated order.
- 10) Grease points indicated in Figs. C and D.
- 11) Mount the coaster (right) assembly and the drive gear (right)assembly as described in section 3-18.
- 12) Mount the timing belt (L), the RC gear assembly and the loading lever assembly as described in section 3 15.
- 13) Mount the switch lever assembly and the pinch roller sub arm assembly as described in section 3-14.
- 14) Mount the drum assembly as described in section 3-13.
- 15) Mount the DC motor (capstan motor) as described in section 3-3.

Note: • Screw should be tightened with a tightening torque of approx. 500g cm. If tightened too much, the coaster (right) assembly and the coaster plate spring will be deformed.

 After installing, be sure to perform tape path adjustment as described in section 4.

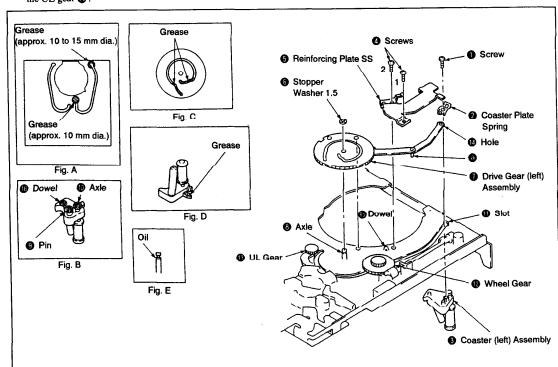

Fig. 3-20.

3-20. LOADING MOTOR, BRAKE RELEASE ARM, WHEEL GEAR, WORM ASSEMBLY

1. Removal (See Fig. 3-21.)

- Remove the DC motor (capstan motor) as described in section 3-3.
- Remove the switch lever assembly and the pinch roller sub arm assembly as described in section 3-14.
- 3) Remove the timing belt (L), the RC gear assembly and the loading lever assembly as described in section 3-15.
- Remove the drive gear (right) assembly as described in section 3-18.
- Remove the drive gear (left) assembly as described in section 3-19.
- Remove the two screws
 , then remove the loading motor assembly
 .
- Remove the brake release arm .
- 8) Remove the stopper washer **(1)**, then remove the wheel gear **(5)**.
- 9) Remove the worm assembly 6 from the six claws 1.

2. Installation (See Fig. 3-21.)

- 1) Mount the worm assembly 6, matching it to the six claws
- 2) Grease the shaded parts of the worm assembly (five places) (see Fig A).
- 3) Apply half a drop of oil to the axle (See Fig. B).
- 4) Fit the wheel gear (5) to the axle (8) and engage it with the gear of the worm assembly (8).
- 5) Mount the brake release arm 3
- Grease the whole perimeter of the gear of the loading motor assembly .
- Align the loading motor assembly with the mechanism chassis and secure it with the two screws .
- Mount the drive gear (left) assembly as described in section 3-19.
- Mount the drive gear (right) assembly as described in section 3-18.
- Mount the timing belt (L), the RC gear assembly and the loading lever assembly as described in section 3-15.
- Mount the switch lever assembly and the pinch roller sub arm assembly as described in section 3-14.
- 12) Mount the DC motor (capstan motor) as described in section 3.3

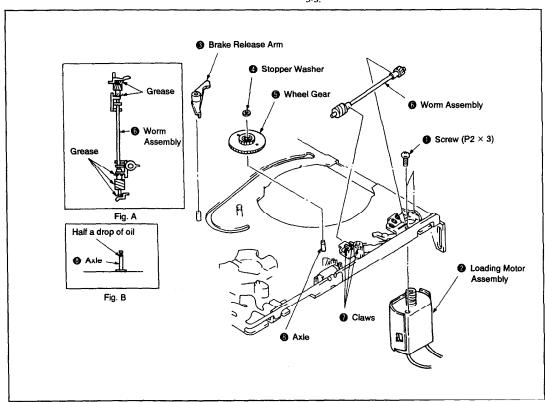

Fig. 3-21.

3-21. ROTARY UPPER DRUM REPLACEMENT

1. Removal

- If possible, make a recording before removal.
- Detach the six solderings then use a pair of tweezers or the like to confirm that the terminals passing through the board holes from below can move freely.
- 2) Remove the two screws (See Fig. 3-22).
- 3) Mount the jig (Ref. No. J-7) with the two supplied screws , then screw the attached hexagon socket screws to the jig . The rotary upper drum will move upward and come off (See Fig. 3-23).

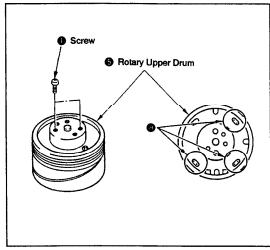

Fig. 3-22.

2. Installation

- Wipe clean the flange surface and the rotary upper drum surface that makes contact with it, and confirm that they are free from dirt and scratches.
- 2) Insert the jig ① (Ref. No. J-7) into the drum positioning hole, then set the rotary upper drum ⑤ by passing the jig through its positioning hole ⑥.
 - Note: Confirm that the terminals protrude slightly from the rotary upper drum board holes (See Fig. 3-24).
- 3) Remove the jig and push down the rotary upper drum gently by hand. If it does not go all the way down, secure it temporarily by tightening the two hexagon socket screws alternately.
- 4) Insert the jig into the positioning hole again and confirm that it goes in smoothly. If it does not, loosen the two screws repeat step 3 of the Removal paragraph and restart the setting procedure.
- 5) Tighten the screws 1.
- Solder the terminals (1) (1) in Fig. 3-22).
 Note: Take care that no solder flows below the board.

Note: After installing, be sure to perform tape path adjustment as described in section 4.

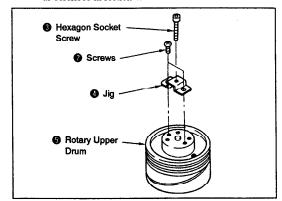

Fig. 3-23.

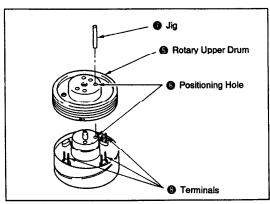

Fig. 3-24.

3-22. FWD BACK TENSION (See Fig. 3-25.)

- 1) Set the torque cassette (Ref. No. J-6).
- Set the FWD mode and confirm that S reel table torque value is within 9 to 13 g cm.
- If the torque value does not meet the specification, adjust the adjust arm 1.

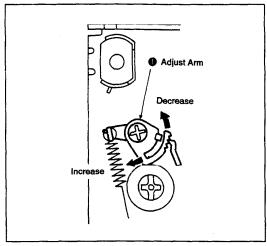

Fig. 3-25.

3-23. REEL TORQUE CHECK

- 1) Set the torque cassette.
- 2) Set the FWD mode and confirm that T reel table torque value is within 7 to 15 g cm.
- 3) Set the REV mode and confirm that S reel table torque value is within 29 \pm 6 g·cm.
- 4) Set the REV mode and confirm that T reel table torque value is within 13 to 25 g cm.
- If a torque value does not meet the specifications above, replace the corresponding reel table.

4. TAPE PATH ADJUSTMENT

[The Track Shift Mode]

In the 8 mm video system, instantaneous tape speed control is performed using four kinds of pilot signals, and high-precision tracking is achieved through the ATF (Automatic Track Finding) system. This makes a tracking control knob unnecessary and allows for precise tracing.

On the other hand, however, tape path adjustment presents some difficulties when the ATF system is used. Namely, since the ATF system will automatically compensate to some degree for head tracing errors, thorough adjustment is not possible.

This can be solved by setting the track shift mode for tracking fine adjustment. ATF will be compulsorily activated, shifting the tracking amount by a fixed amount (approx. 1/4) and thus making tracking fine adjustment easy. Furthermore, no track shift jigs are required.

4-1. TRACK SHIFT MODE SETTING

[Setting Procedure]

 Connect the TEST A and TEST B terminals to the COM terminal.

Example:

NTSC GV-8
PAL GV-8E
Connect Pins ① and pin ③ of CN017 on the

{ SV-34 board (GV-8) } to pin ② of it. (See Fig. 4-1)
SV-35 board (GV-8E)

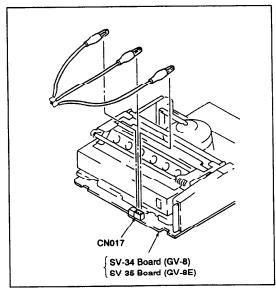

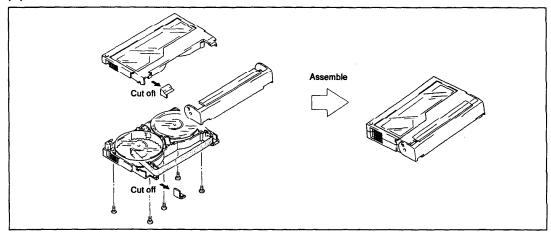

Fig. 4-1.

[Note on Adjustment of No.7 Guide (TG-7)]

The height adjustment screw for No.7 guide (TG-7) is located at some distance from the guide (refer to Fig. 4-2). Therefore, when performing section 4-6. No.7 Guide (TG-7) Adjustment it is convenient to use the alignment tape for tracking (Ref. No. J-5), modified as follows, and perform adjustment in playback mode.

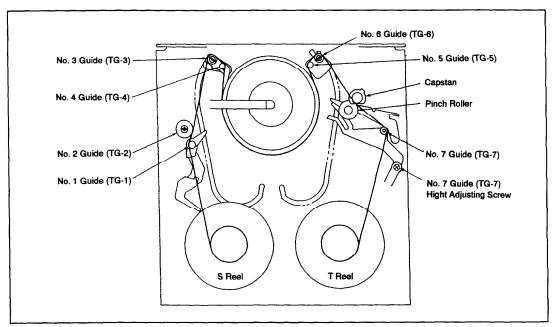

Fig. 4-2.

4-2. PREPARATIONS FOR ADJUSTMENT

- 1) Clean tape path surfaces (tape guides, drum, capstan shaft, pinch roller) (See Fig. 4-2).
- Connection of oscilloscope and output method of waveform.
 CH 1: RF signal output of the drum head (V RF OUT)
 Method for signal output:

Short-circuit the external trigger output (RF SW. P) and GND.

Example:

- Play back the alignment tape for tracking adjustment (Ref. No. J-5).
- 4) Confirm that both the entrance and exit side RF waveforms of the oscilloscope are flat (See Fig. 4-4). If they are not, adjust as follows.

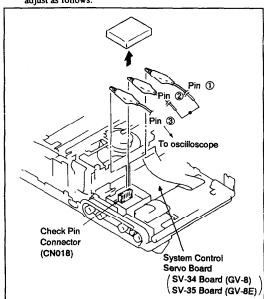

Fig. 4-3.

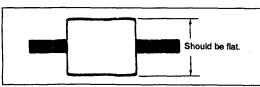

Fig. 4-4.

4-3. TRACKING ADJUSTMENT (See Fig. 4-5.)

- 1) Play back the alignment tape for tracking adjustment.
- 2) Pass a hexagonal wrench, screwdriver (Ref. No. J-11) or the like through the hole , loosen the lockscrew a little, then make the entrance side waveform flat by turning the No. 3 guide (TG-3) .
- 3) Pass a hexagonal wrench, screwdriver or the like through the hole 4, loosen the lockscrew 5 a little, then make the exit side waveform flat by turning the No. 6 guide (TG-6) 6.

Note: Take care not to loosen lockscrews too much, since guides come loose easily.

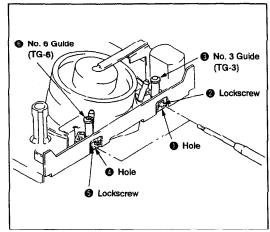

Fig. 4-5.

4-4. TRACKING FINE ADJUSTMENT (See Figs. 4-5. and 4-6.)

- Play back the alignment tape for tracking adjustment and set the track shift mode.
- Confirm whether the waveform is flat. If it is not, turn the No. 3 (TG-3) and No. 6 (TG-6) guides so that it becomes flat.
- 3) Fix the No. 3 guide 3 by tightening its lockscrew 3. Then confirm that the entrance side waveform has not changed.
- Fix the No. 6 guide by tightening its lockscrew . Then confirm that the exit side waveform has not changed.

Note: The set screws ② and ③ should be tightened with a tightening torgue of approx. 200g•cm ± 10%.

If tightened too much, there is danger of damaging the thread.

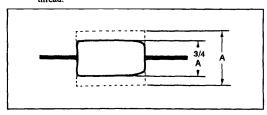

Fig. 4-6.

4-5. No. 2 GUIDE (TG-2) ADJUSTMENT

When the No. 2 guide has been turned or replaced, perform height presetting before this adjustment.

4-5-1. No. 2 Guide (TG-2) Height Presetting (See Fig. 4-7.)

 Adjust the height from the mechanism chassis upper surface to the TG-2 upper flange upper surface to 18.6 mm by rotating the TG-2 upper flange

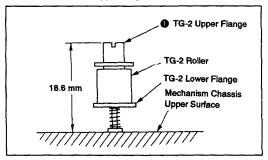

Fig. 4-7.

[Reference]

This U mechanism is equipped with four adjustable guides (TG-2, 3, 6 and 7). To raise or lower the respective guide rotate the corresponding adjustment screw as shown below.

Guide	Guide adjustment	Rotating direction of adjustment screw					
TC 2 2 4	Raise	Counterclockwise					
TG-2, 3, 6	Lower	Clockwise					
TG-7	Raise	Counterclockwise					
10-/	Lower	Clockwise					

4-5-2. No. 2 Guide (TG-2) Adjustment (See Figs. 4-8. and 4-9.)

- Play back a thin tape like the P6-120MP, etc. and set the REV mode.
- 2) Confirm that the tape is not bent at the lower flange of the No. 2 guide (TG-2) (See Fig. 4-8). If it is, turn the upper flange of the No. 2 guide (TG-2) clockwise with a screwdriver, lowering it until the tape is straightened.
- 3) Play back the alignment tape for tracking adjustment.
- 4) Perform tracking adjustment and tracking fine adjustment as described in sections 4-3. and 4-4.
- 5) In the track shift mode, CUE/REV the tape, then play it back and confirm that the RF waveform rises flat within 2 seconds.
- 6) If the waveform is not normal (See Fig. 4-9), turn the upper flange 6) of the No. 2 guide (TG-2) 190° counter-clockwise and repeat step 5.

Repeat steps 5 and 6 until a normal waveform is obtained. Then, confirm that the tracking waveform has not changed. If it has, perform fine adjustment of entrance side tracking and repeat step 5.

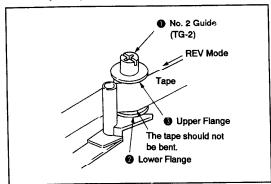

Fig. 4-8.

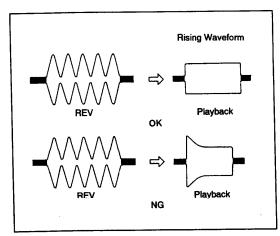

Fig. 4-9

4-6. No. 7 GUIDE (TG-7) ADJUSTMENT (See Fig. 4-10.)

- Play back the alignment tape for tracking adjustment and set the REV mode.
- 2) Confirm that the tape is not bent between the No. 6 guide (TG-6) and the capstan . If it is, turn the hight adjusting screw of the No. 7 guide (TG-7) until the tape is straightened.
- 3) Set the playback mode again and confirm that the tape is not bent between the capstan and the hight adjusting screw to fithe No. 7 guide (specification: 0.5 mm or less). If the tape is bent beyond the specification, turn the No. 7 guide (TG-7) until bending is within the specification (0.5 mm). If in the REV mode tape bending between the No. 6 guide (TG-6) and the capstan is 0.3 mm or less, adjustment can be considered completed.

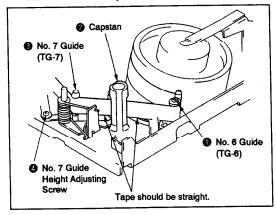

Fig. 4-10.

4-7. CUE AND REV WAVEFORM CHECK (See Fig. 4-11.)

- Play back the alignment tape for tracking adjustment and set the REV mode. Confirm that waveform peaks maintain a constant pitch of 5 seconds or more (See Fig. 4-11). In case pitch is not constant, perform section 4-4. Tracking Fine Adjustment and section 4-6. No. 7 Guide Adjustment.
- Set the CUE mode. Confirm that waveform peaks still
 maintain a constant pitch of 5 seconds or more (See
 Fig. 4-11). Otherwise, perform section 4-4. Tracking Fine
 Adjustment.

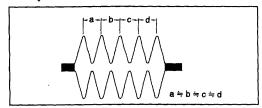

Fig. 4-11.

4-8. CHECK AFTER ADJUSTMENT

4-8-1. Tracking Check

- Confirm that the amplitude of RF waveform is reduced to approx. 3/4 when the track shift mode is set (See Fig. 4-12).
- Then, confirm that the minimum amplitude value (EMIN) is 65% of the maximum value (EMAX) or larger (See Fig. 4-13).
- Confirm that no large fluctuations occur on the waveform (See Fig. 4-14).

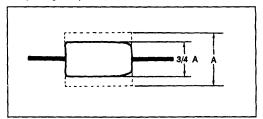

Fig. 4-12.

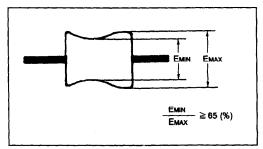

Fig. 4-13.

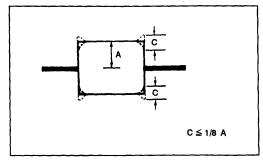

Fig. 4-14.

4-8-2. Rising Check (See Fig. 4-15.)

- 1) Play back the alignment tape for tracking adjustment.
- 2) Cancel the track shift mode.
- 3) Eject the tape, then load it again.
- 4) Set the playback mode and confirm that the RF waveform rises flat within 2 seconds. Also confirm that the tape is not bent around the pinch roller (See Fig. 4-15).
- 5) CUE/REV and FF/REW the tape, then play it back and confirm that the RF waveform rises flat within 2 seconds. Also confirm that the tape is not bent around the pinch roller.
- 6) Repeat steps 3) to 5) once more.

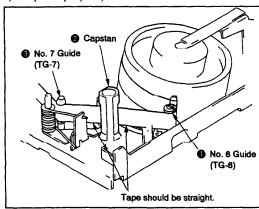

Fig. 4-15.

4-8-3. Tape Path Check (See Fig. 4-16.)

- Play back a thin tape like the P6-120MP (NTSC) or P5-90MP (PAL), etc. and confirm that no tape rising occurs, and that curling is less than 0.3 mm, at the lower flange of the No. 2 guide, the upper flange of the No. 3 guide, the upper flange of the No. 6 guide and the No. 7 guide upper and lower flanges.
- 2) Confirm that no tape rising occurs and that curling is less than 0.3 mm at the flanges of all guide when pressing the FF button in the playback mode to set the CUE mode, or the REW button to set the REV mode.

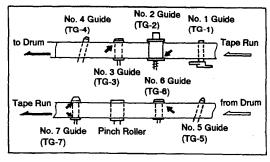

Fig. 4-16.
